SAFETY TEST

All Monitors are safety tested to the following specifications.

1). Flash Test

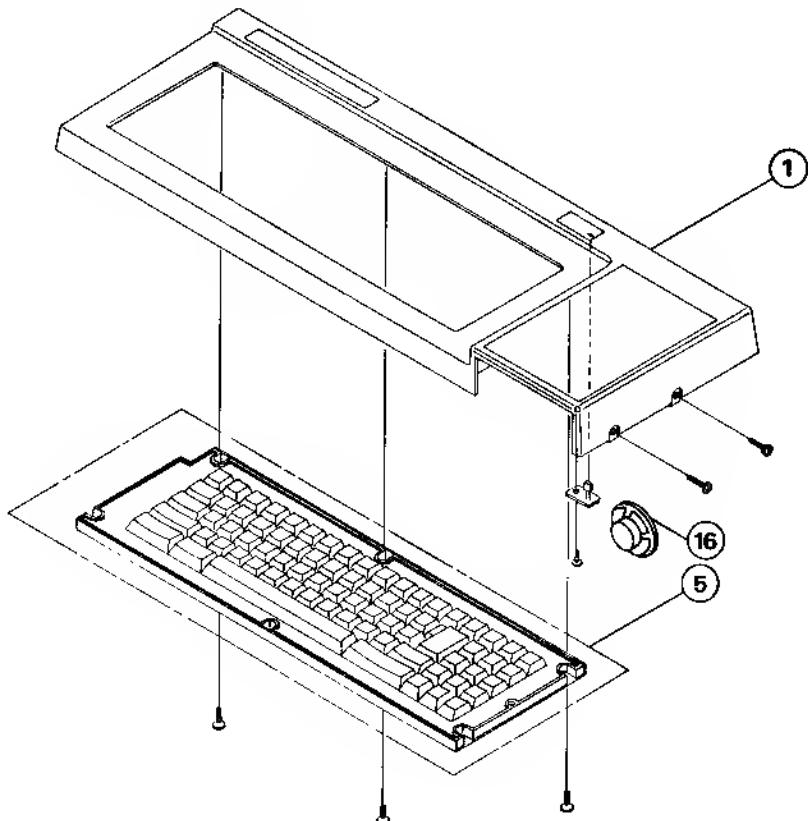

Test at 3kV between the live and neutral of the mains lead joined together and and ALL accessible metal points on the exterior of the set.

2). Insulation Resistance Test

Test between the live and neutral of the mains lead joined together and ALL accessible metal points on the exterior of the set to show a resistance of at least 4Mohm.

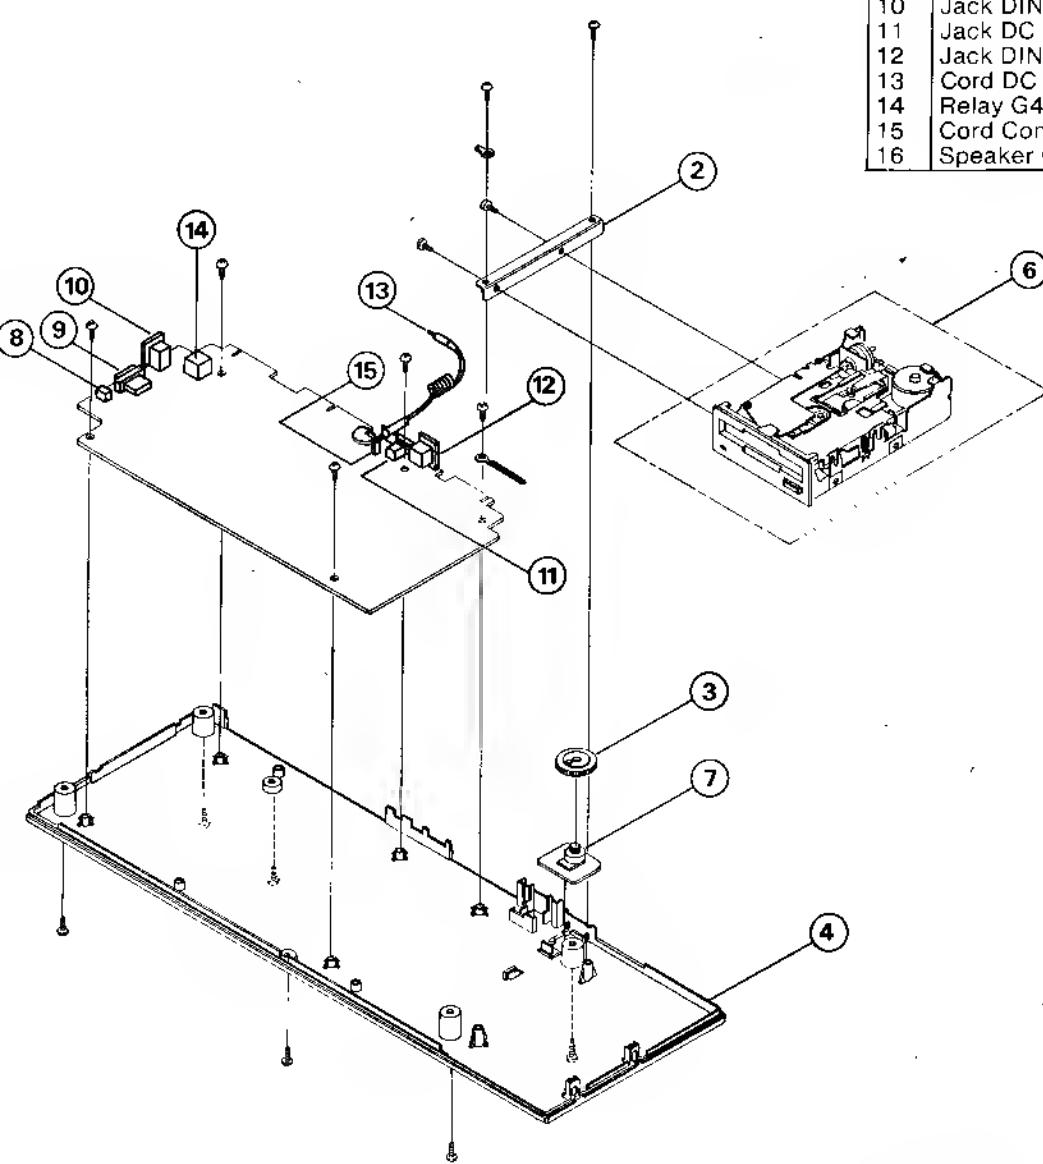

If after servicing there is any doubt about continued electrical safety the above tests should be carried out.

CPC6128 – BASIC HARDWARE ANALYSIS

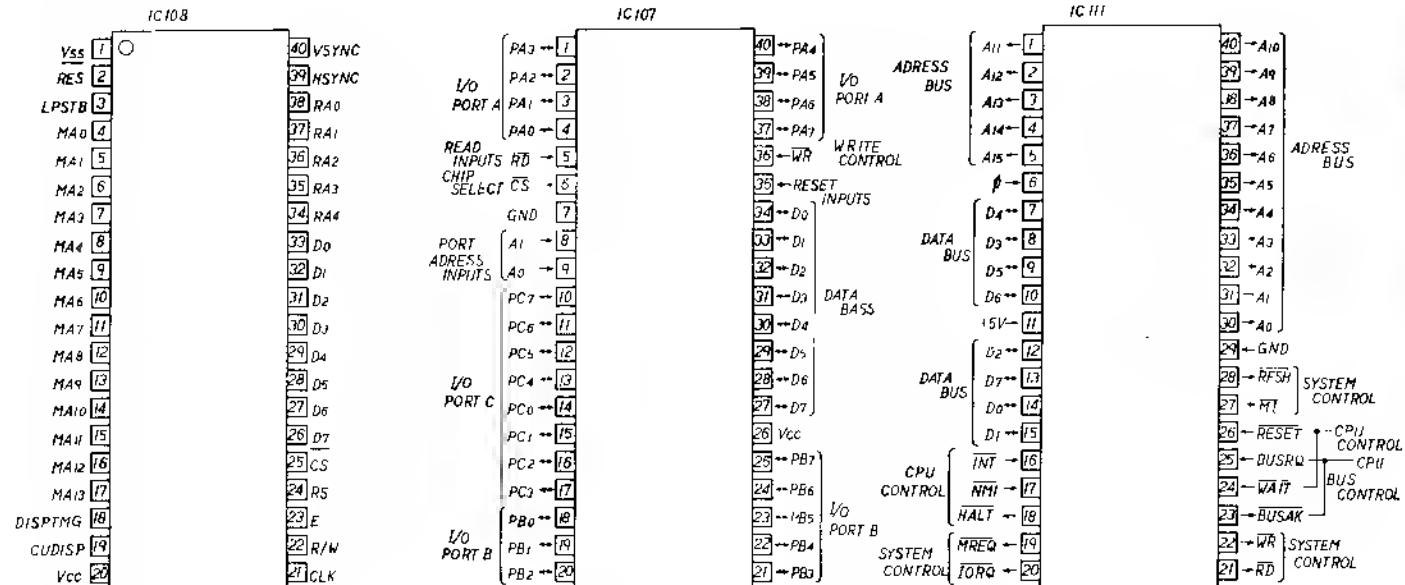

Full diagnostic tests on the C.P.U. can be carried out using the Amstrad RP2 Test Pack.
Please contact Amstrad PLC for information on same.

Software Errors

If a drive fault is reported the fault may be a software problem. Before investigating the drive please carry out the following checks to ensure it is not a software problem.

Detection and Correction of "Soft Errors"

Soft errors are usually caused by the following reasons.

- 1) Random external noise of several usec or less.
- 2) Minute off-tracking and shifting of write timing that are not detected during the write operation which can cause the soft error during the read.

To remedy such soft errors, take the following procedures at the controller side.

- 1) Repetitive reading on the track by 10 times or more until the data is restored.
- 2) When the data is not restored by step 1, access the head to the adjacent track in the same direction as move previously, and thereafter return the head to the original track.
- 3) Repeat the step 1.
- 4) If the data is not restored by the above steps, the error cannot be remedied

Write Error

When an error is caused during the write operation, the error is usually detected during the next rotation through the read operation called "Write check".

To correct the error, repeat the write operation again and carry out the Write check.

If the result is still incorrect even after the write operation is repeated more than 10 times, either the disc or the drive are working incorrectly. To find out the trouble source, carry out the read operations with another track. Should the error still be found, change the disk and repeat the above procedures. Should error still be found, the drive should be considered defective. If the error is removed, the original disk must be defective. Discard it.

Seek Error

- 1) Step motor or step motor drive circuit is defective.
- 2) The torque of the carriage is not correct.

Restoration procedures from the seek error.

Make the re-calibration to the track 00. Then, carry out the re-seek to the original track.

Notes:

- 1) Always ensure the head is clean.
- 2) Index/Sector Factor (Ready Defect)

As the unit has Optional Read Output

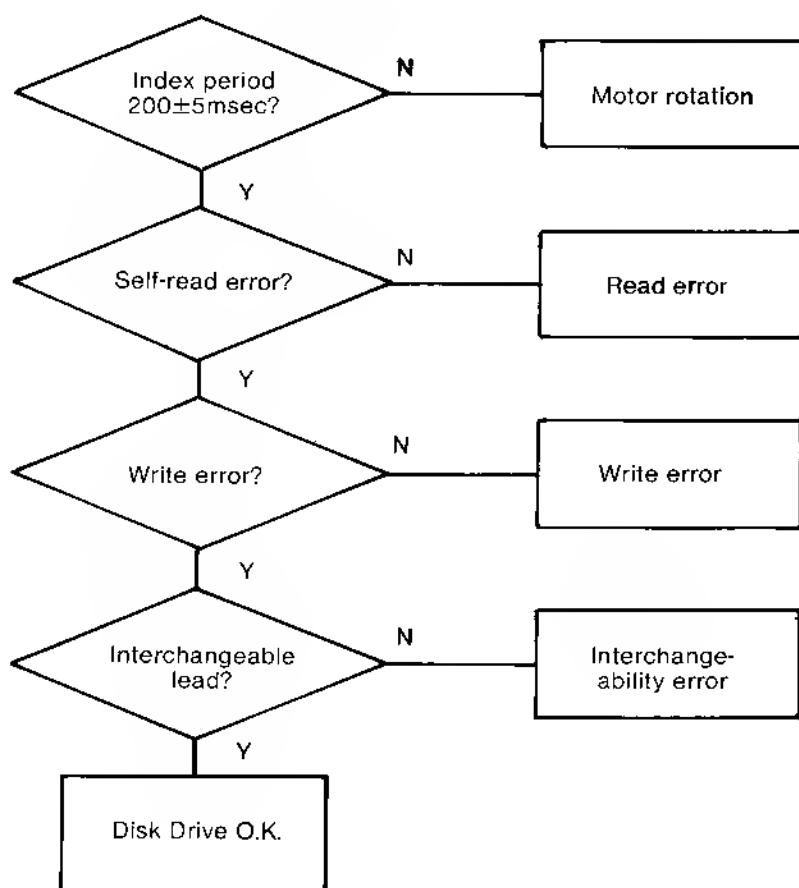

It is normally not ready until 2 revolutions are made after the disk insertion.

Diagnostic Flow Chart

This chart must be used in conjunction with the Alignment Procedures.

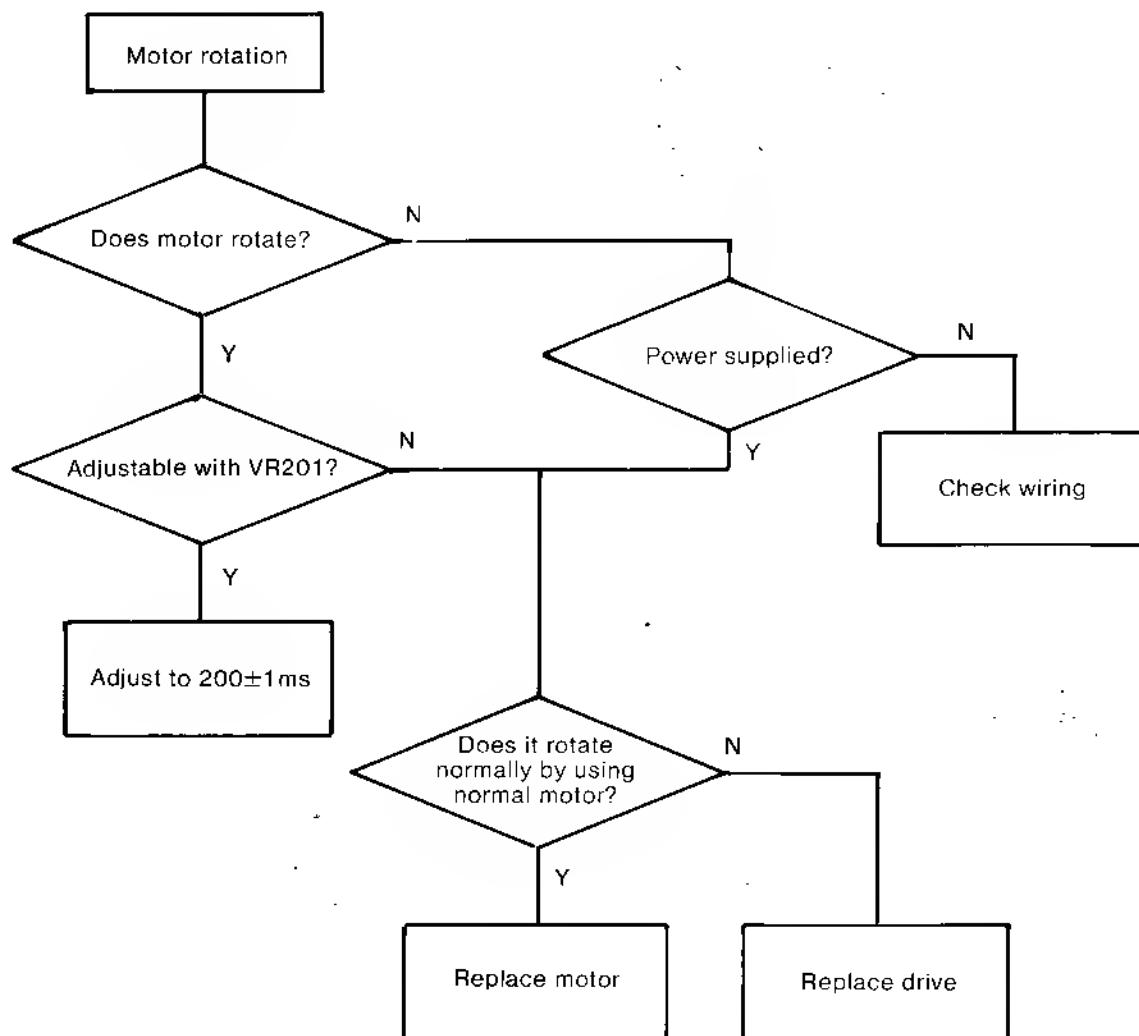

This chart is for information only and does not guarantee an exact diagnosis. For warranty purposes any faulty drive mechanism must be returned to Amstrad for replacement. Service Agents should not attempt any repairs on the mechanism or to its P.C.B. P.No. 30001.

3-A

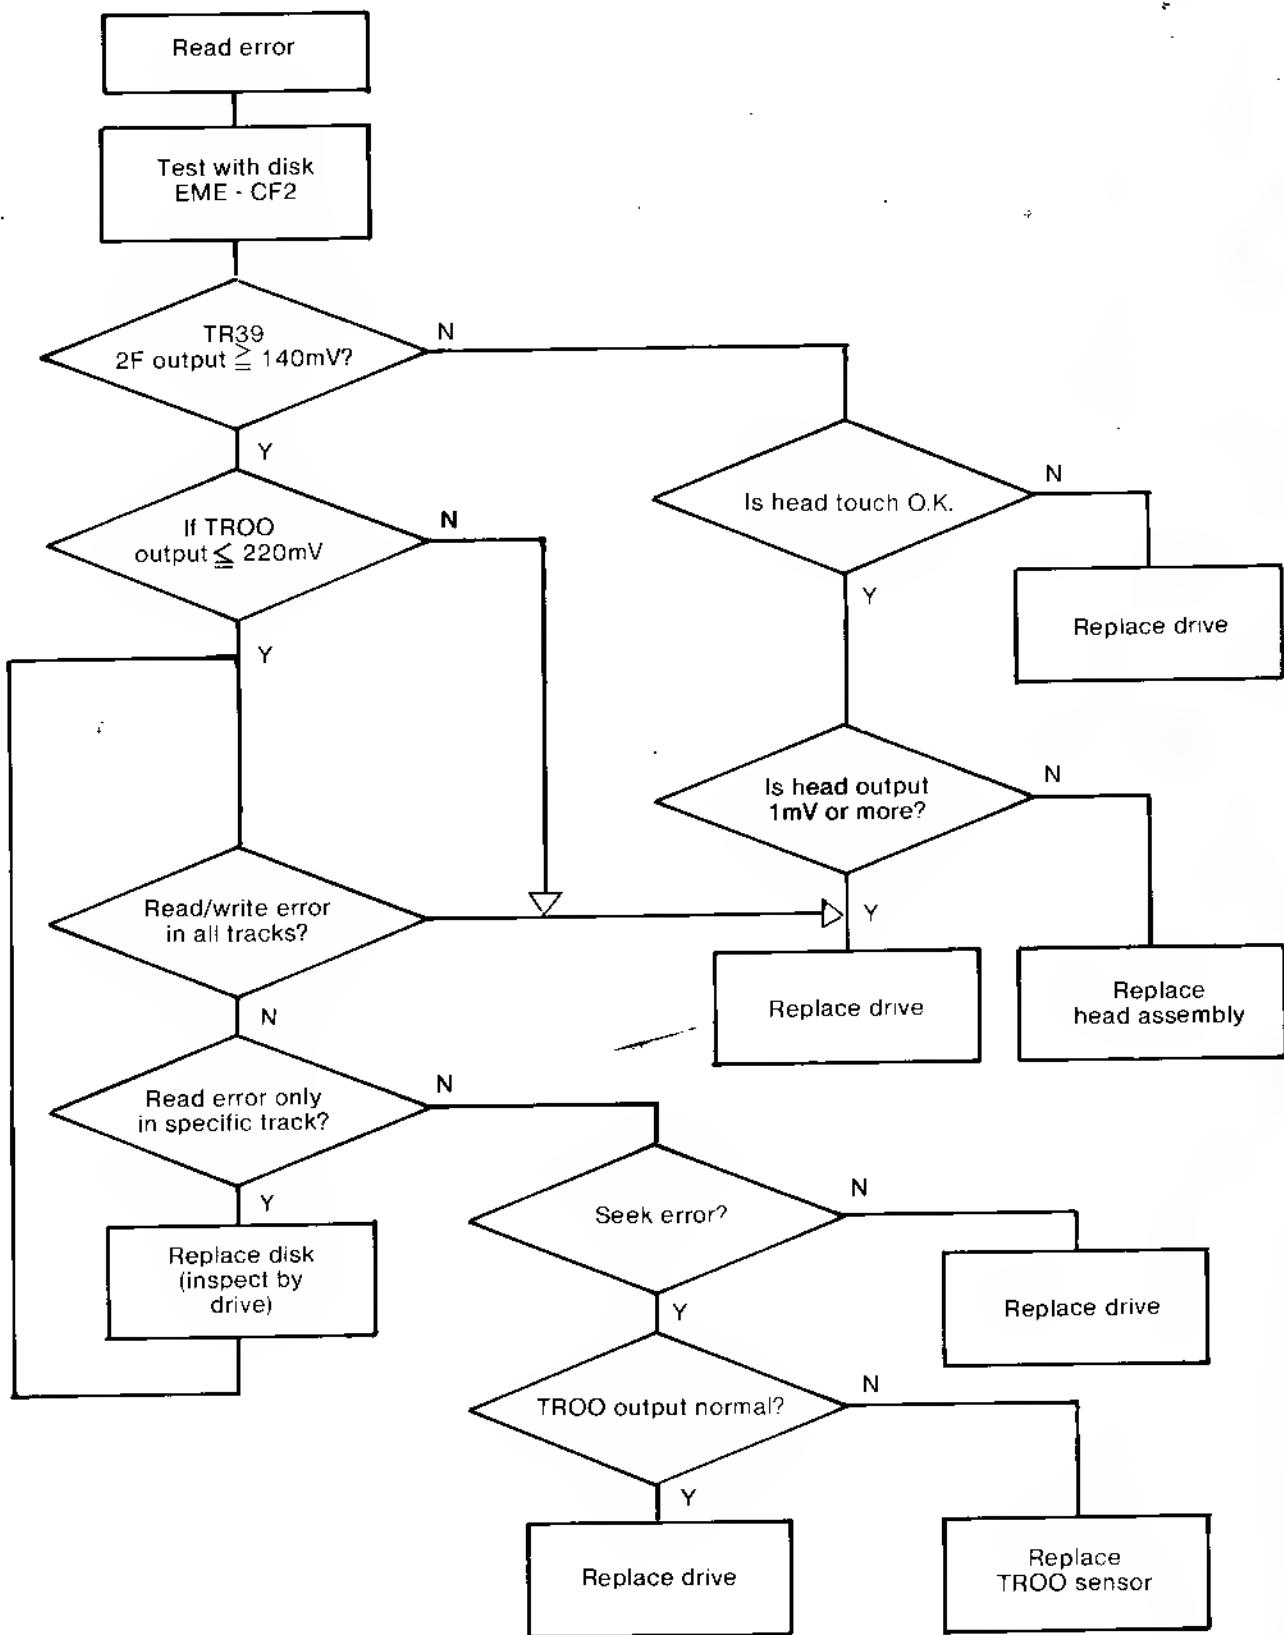

FLOW CHART (cont)

3-B

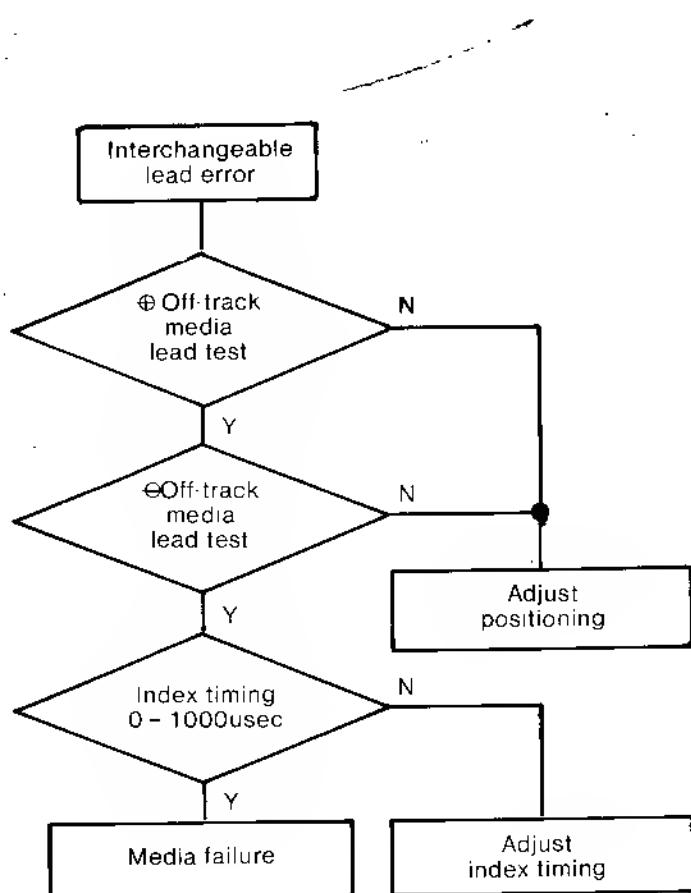

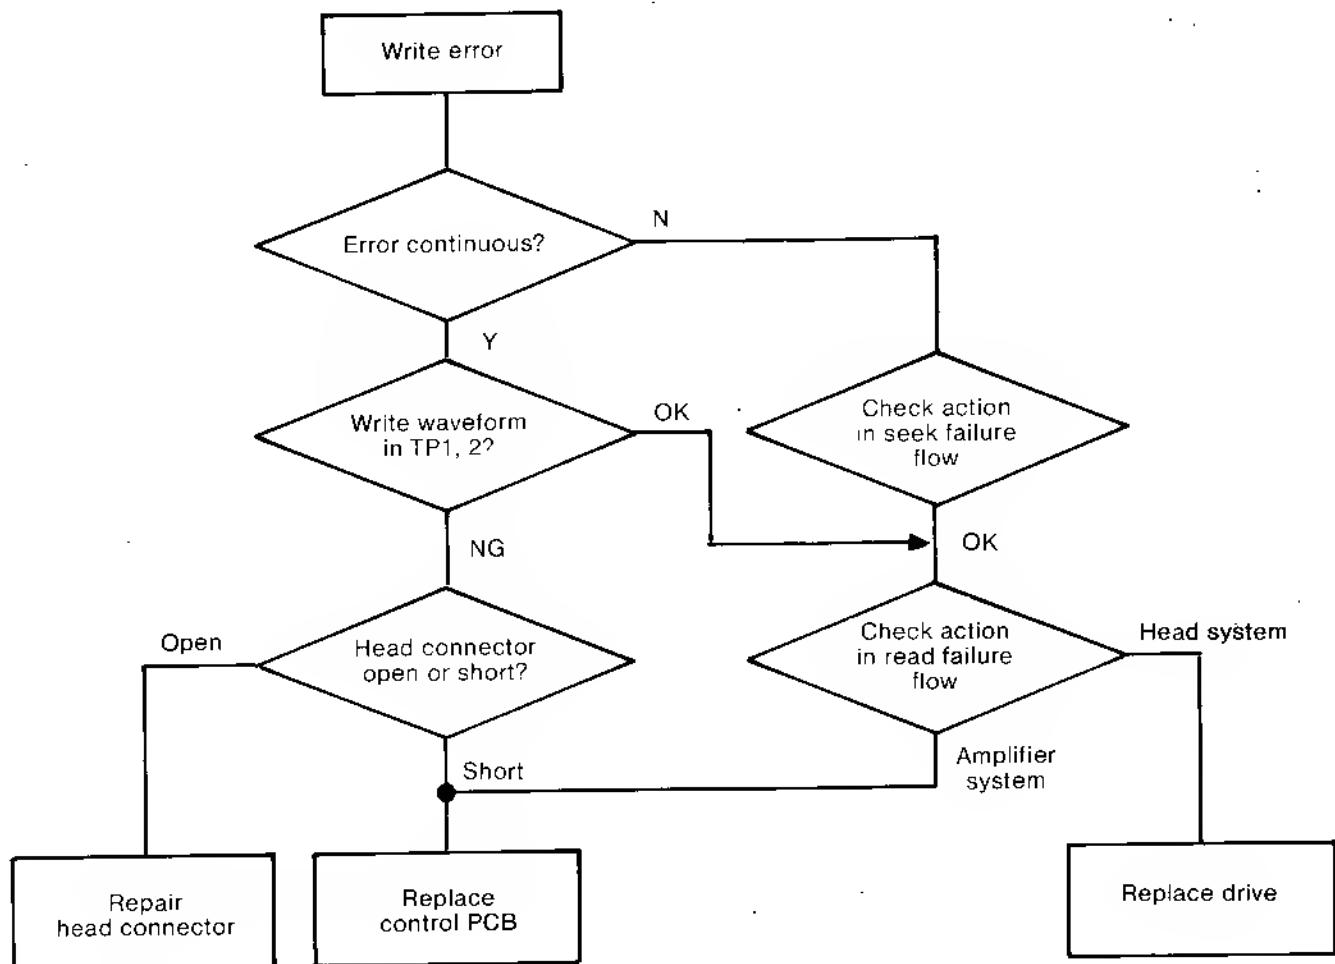

FLOW CHART (cont)

3-C

FLOW CHART (CONT)

3-D

The data contained in the following 4 pages is for information only. Service Agents must not carry out any repair or adjustment to the Drive mechanism and its associated PCB 30001 during warranty. Faulty mechanism must be returned to AMSTRAD for exchange.

Alignment Checks

Please use this information in conjunction with the diagnostic flow chart.

Equipment required: Double Beam Scope; EME - CF2 Test Disk (please refer to disk notes for usage).

The following checks can be carried out in routine servicing. If the wave patterns do not appear this confirms a fault with the mechanism. Before attempting any replacement check these waveforms thoroughly.

| | |
|---|-----------------------|
| Content of adjustment and checking | CE DISK EME CF2 |
| 1. Radial adjustment by use of Track 19 (Fig. 1). | <input type="radio"/> |
| 2. Adjustment of the index burst by use of Track 39 (Fig. 2). | <input type="radio"/> |
| 3. Azimuth check by use of Track 39 (Fig. 3-4). | <input type="radio"/> |

List of Test Points

| Test point | Name of signal |
|------------|------------------------------|
| TP 1 | Read signal of filter outlet |
| TP 2 | Read signal of filter outlet |
| TP 3 | Signal ground |
| TP 5 | TROO sensor output |
| TP 9 | Index signal |
| TP 11 | Signal ground |

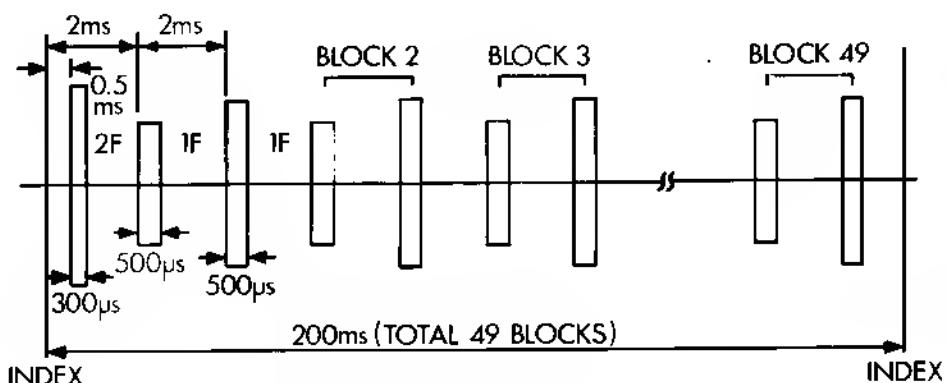

Fig.1 Waveform of T19 (Servo pattern)

ALIGNMENT CHECKS

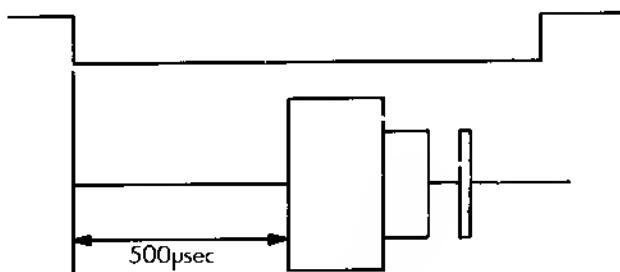

Fig. 5-1 Index burst waveform

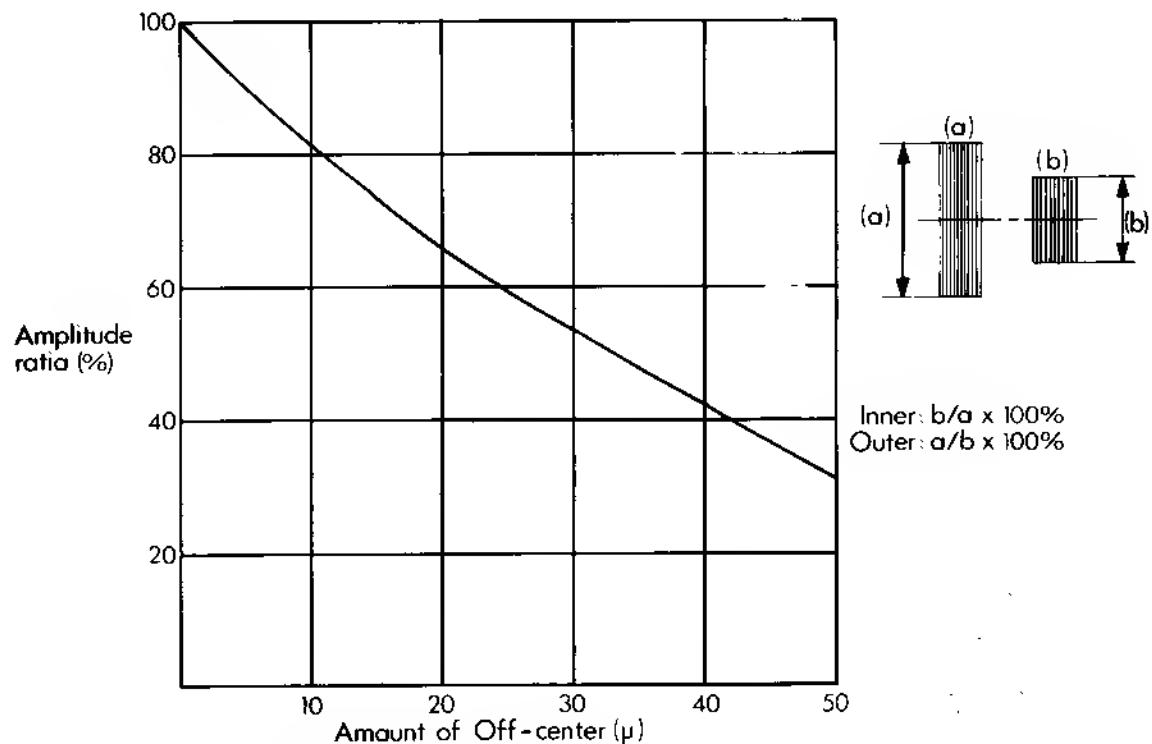

Fig. 5-2 Off-centre calibration curve
(Effective width of read head is 180 μ)

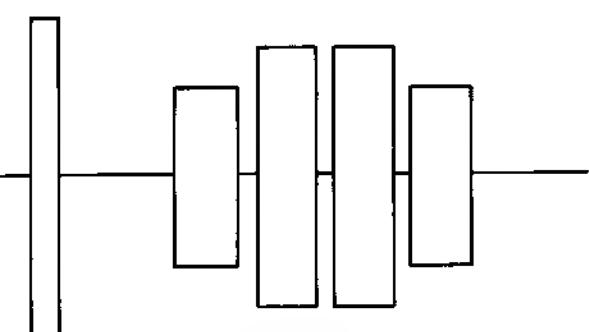

Fig. 5-3 Azimuth burst

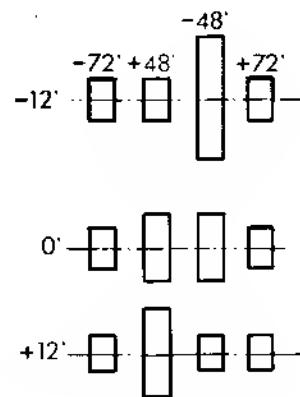

Fig. 5-4 shows azimuth burst in the cases of azimuth -12°, 0° and +12°.

ALIGNMENT CHECKS (cont)

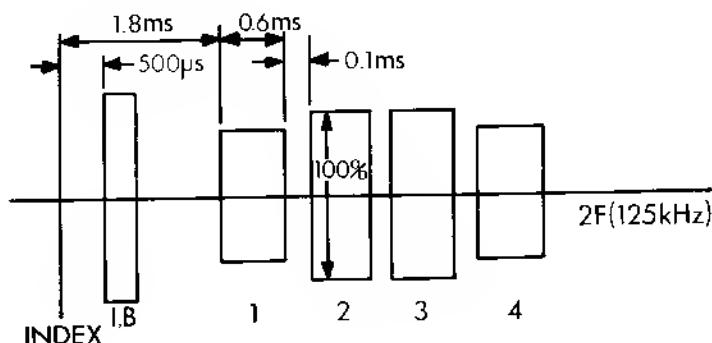

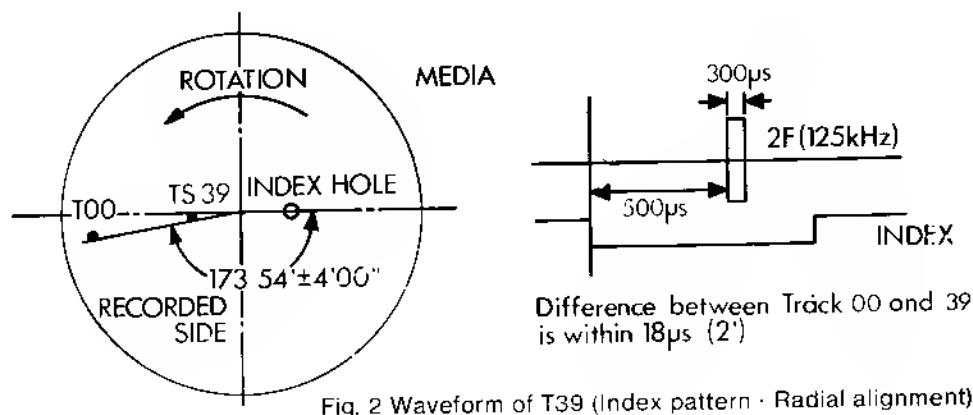

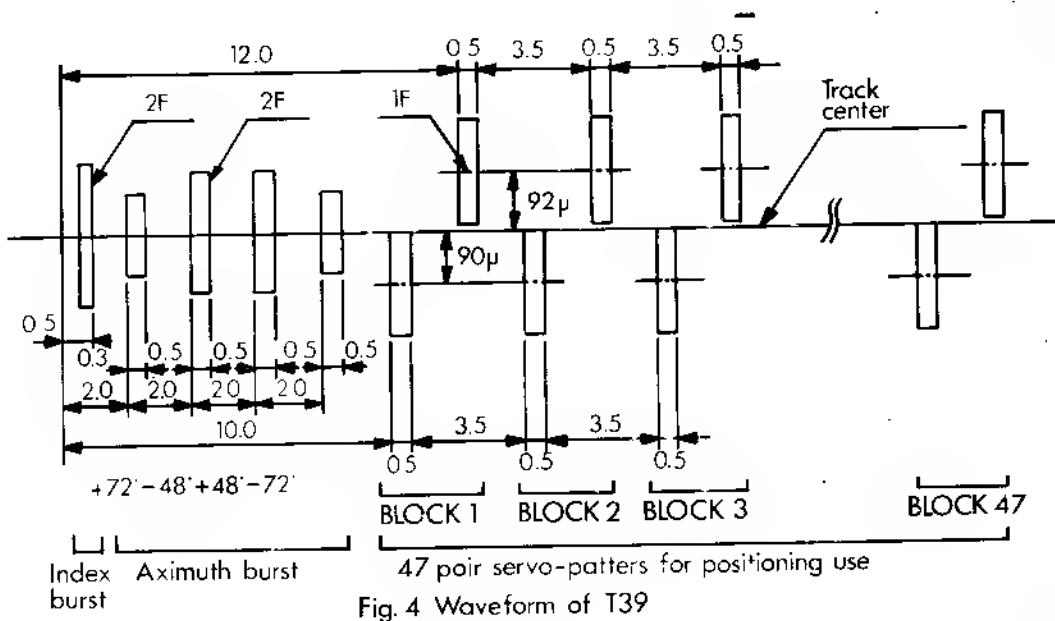

Fig. 3 Waveform of T39 (Azimuth, alignment)

ALIGNMENT CHECKS (cont)

1) Check Positioning

- 1) Load CE Disk.
- 2) Set up track 00, Motor off.
- 3) Scope to TP5.
- 4) Adjust 00 Sensor (8 on Fig. 6) so that scope shows correct difference as Fig. 2.

2) Adjustment of Index Timing

- 1) Load the CE Disk (refer to disk info)
- 2) Step the disk to the track 39.
- 3) Synchronise the oscilloscope by TP9 (INDEX). Set the time base to 0.1 msec/DIV.
- 4) Connect the probe to TP1.
 Connect the ground probe to TP3 and TP11 (ground) of PCB.
 Set the input to AC and set the vertical axis to 20mV/DIV.
- 5) Measure timing between sweep start and an initial data pulse. It should be 500 usec \pm 500 usec.
When the timing is not within this range, proceed with the following adjustment. (Refer to Fig. 5-1).
- 6) Loosen the two screws fixed LED printed board. Adjust the position of LED printed board so that the timing is 500 usec \pm 100 usec.
- 7) Re-check the timing.
- 8) Seek to the track 00 and make sure that the timing is within 500 usec \pm 200 usec. Tighten the screws. (Fig. 5-1).

3) Check of Head Output

This check is effective only when making write and read check as described below. If the output level is less than the prescribed output, clean the head before check.

Disk used for this check **must** be in good condition.

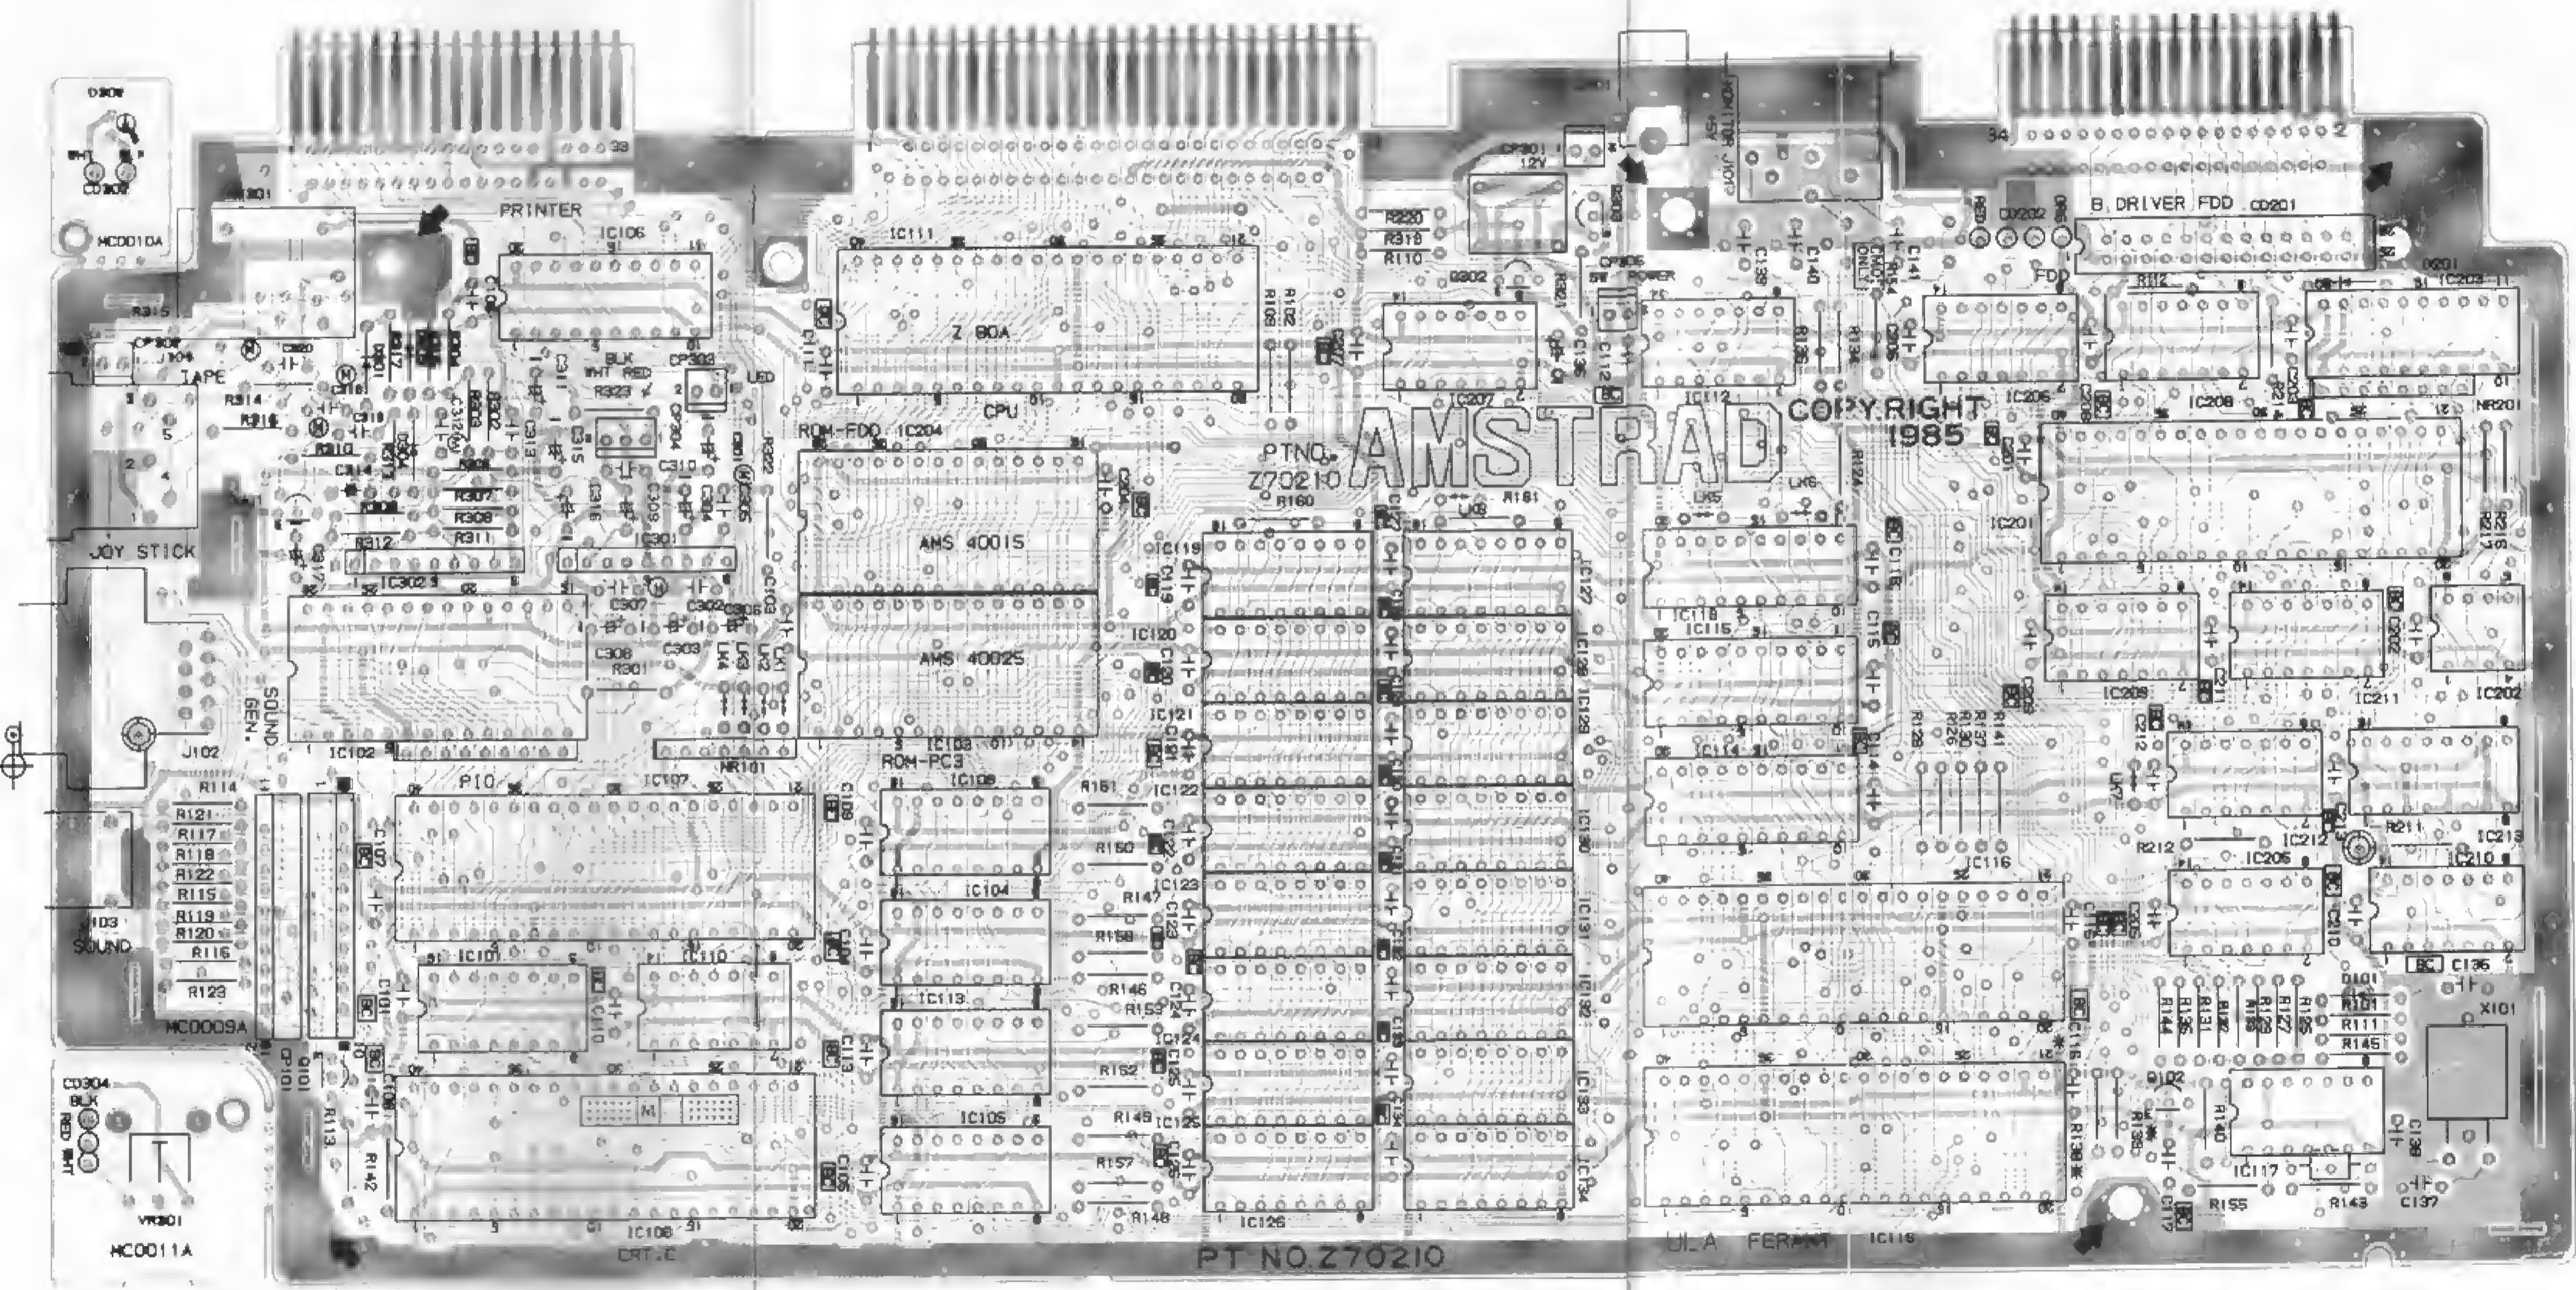

- 1) Load the CE Disk.
- 2) Select track 39.
- 3) Connect one of the probes of the oscilloscope to TP1 of the printed circuit board, another probe to TP2, and the probe to ground to TP3, TP11 (ground)
Invert one channel, and set it to Add input, set input to AC, and set the vertical axis to 50mV/DIV and the horizontal axis to 20msec/DIV.
- 4) Make sure the average output level is the following value or more: 140 mV p-p (SN 25dB or more)
 If the output is less than the above-described value, replace the head.

4) Adjustment of Positioning

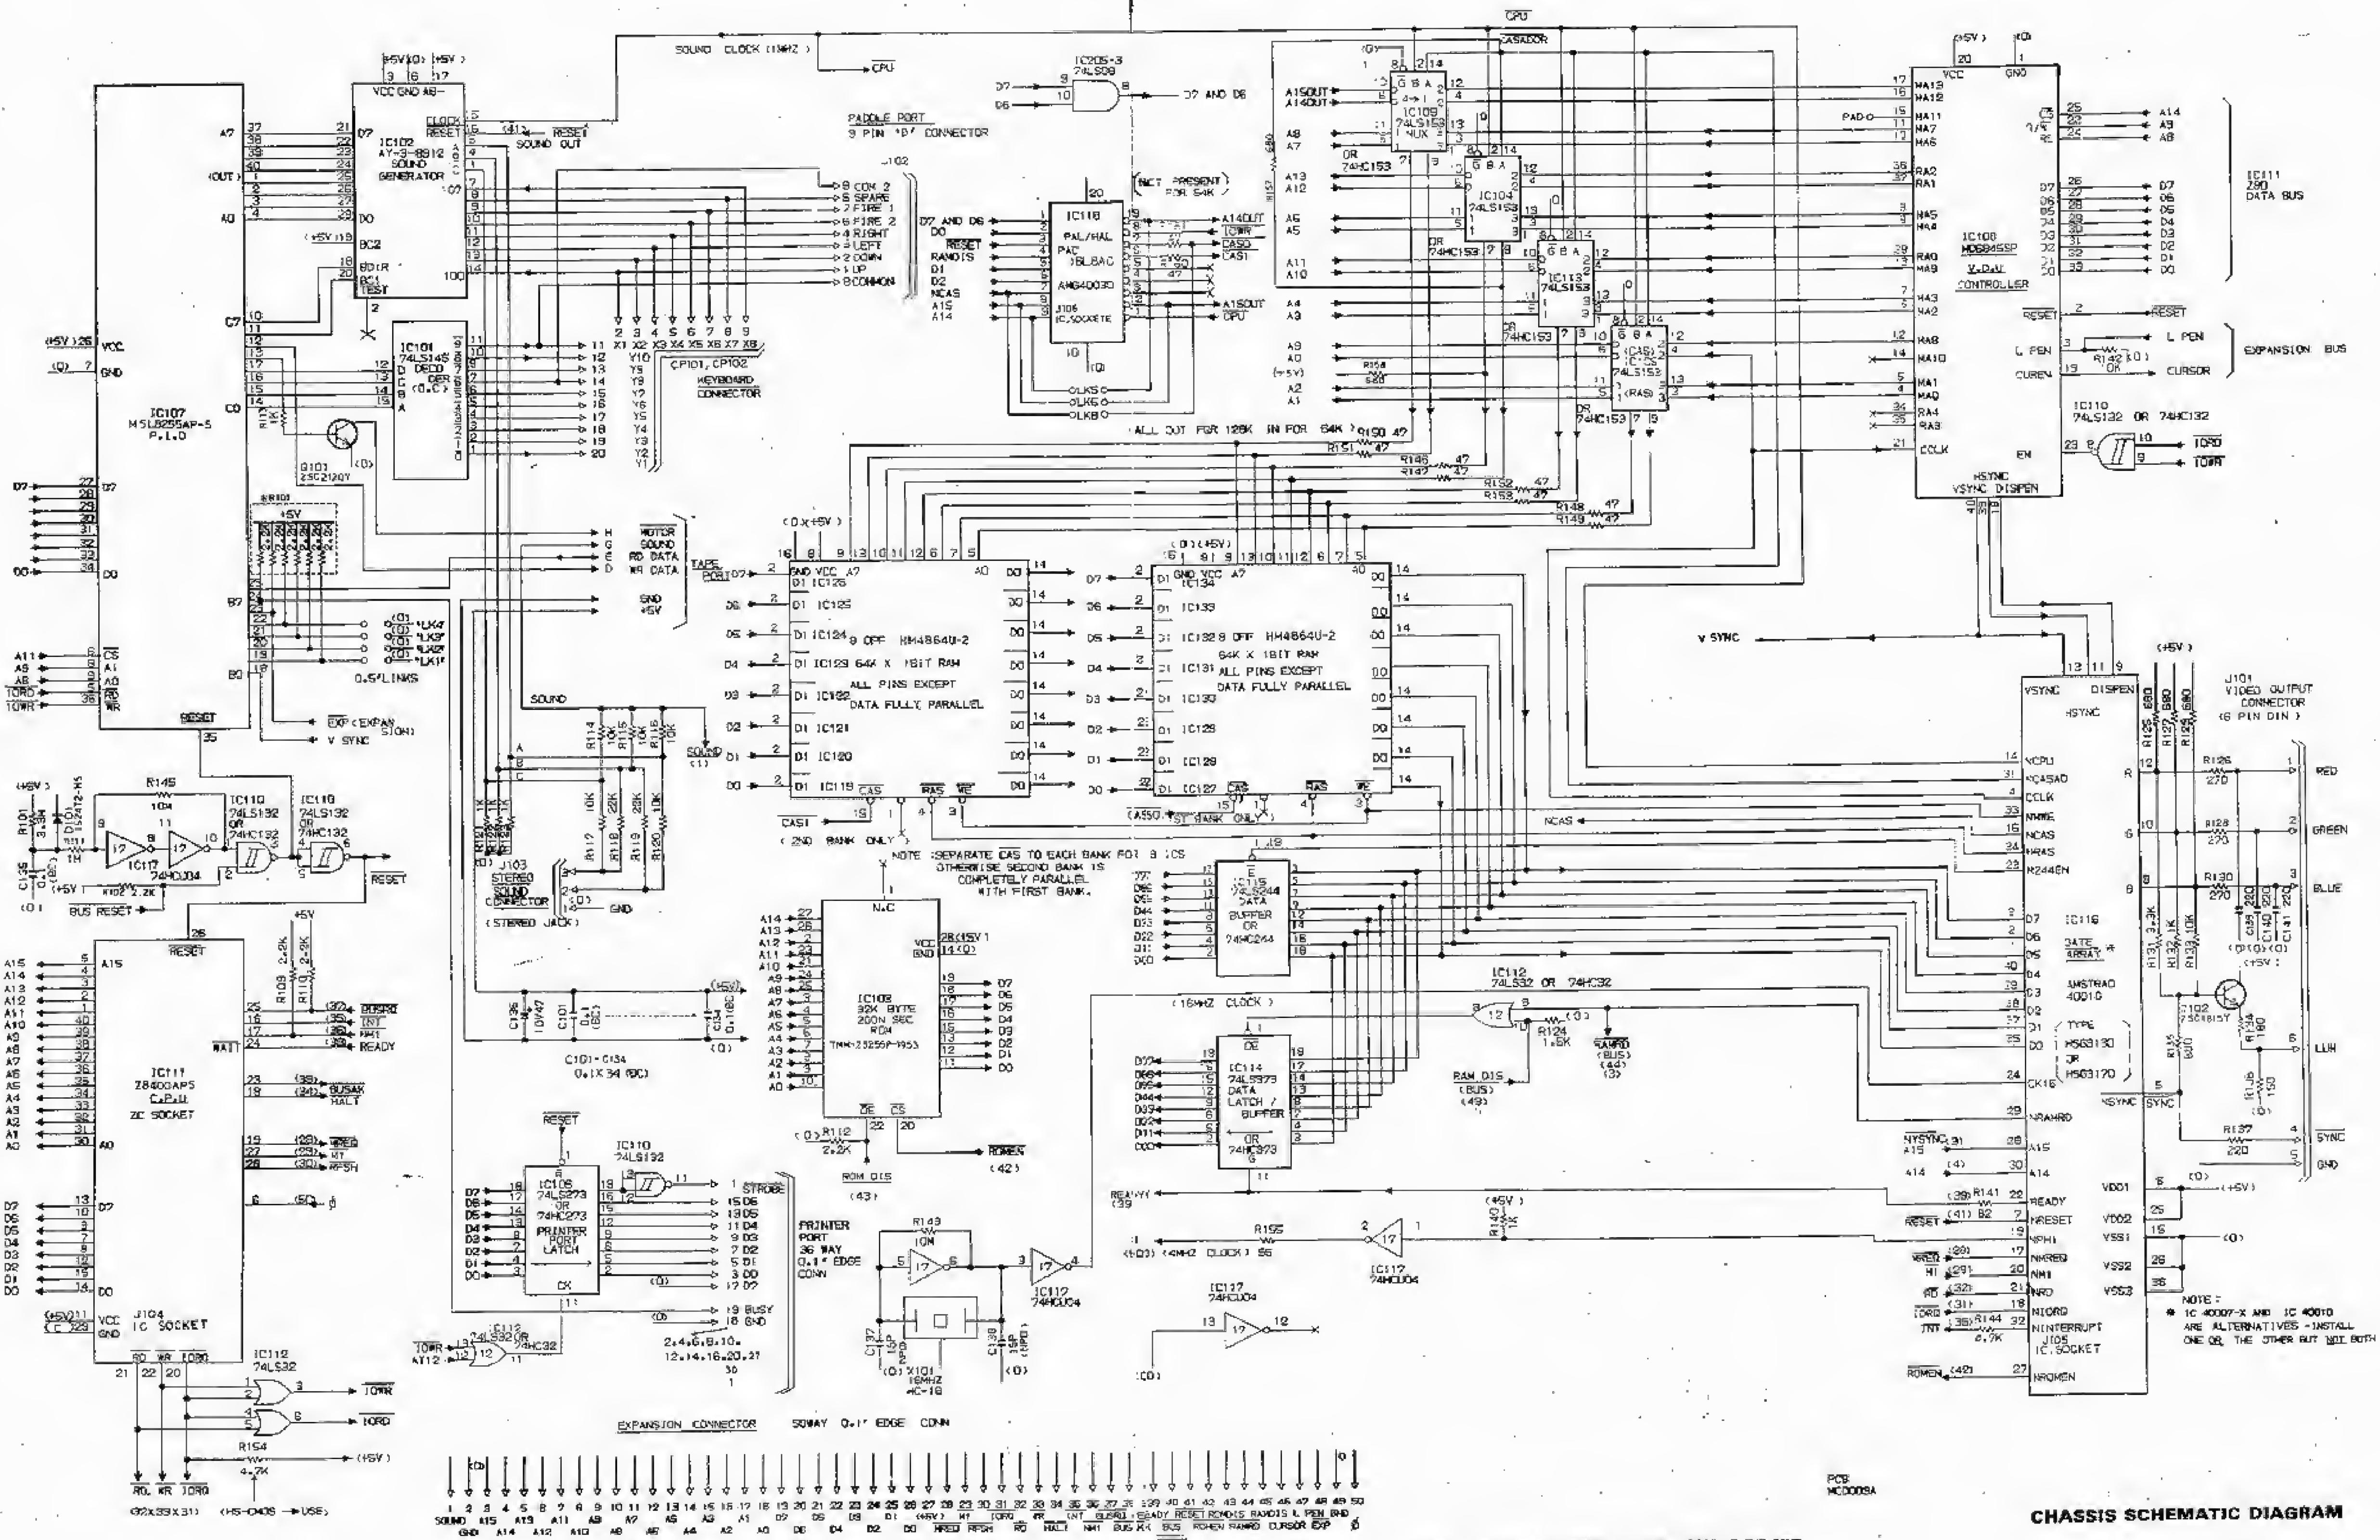

- 1) Load CE disk.
- 2) Select Track 19.
- 3) Monitor the output in the same way as the head output inspection.
 Calculate the off-track amount in reference to the calibration graph, showing the interrelation between the burst amplitude ratio and off-track amount. (Refer to Fig. 5-2).
- 4) The average of amplitude ratio should be below 26 uM.
 If it is not within this range, make the following adjustment.
 - i) Loosen the bolt of the rotation stopper which fixes the screw shaft (Fig. 6-3).
 Rotate the screw shaft and adjust it in such a way that the amplitude ratio may become below 15 uM. Tentatively set the bolt at that position.
 - ii) Make the to track step to the inner and outer circles and bring it to the original position. Make sure that the adjustment is all right. Then, tighten the bolt.

5) Confirmation of Head Azimuth

- 1) Load the CE Disk
- 2) Select Track 39.
- 3) Synchronise the probe of the oscilloscope by TP9 of PCB and connect another probe to TP1, and the probe ground to TP3, TP11 (ground). Set the input to AC, the vertical axis to 10 mV/DIV, and the horizontal axis to 0.5 msec/DIV. Make sure that the two outside burst waveforms are smaller than two inside burst waveforms as shown in Fig. 5-3.
 Note: Signal preceding the azimuth burst is the index burst.
 If the azimuth is still incorrect replace the head assembly.

CTM644 ALIGNMENT INSTRUCTIONS

| STEP | FUNCTION | SIGNAL IN | SIGNAL OUT | METHOD | REMARKS |
|--|----------------------------------|------------------------|--|--|---|
| 1 | Black and White Tracking | | Monitor Screen | 1. Turn R & B Drive Controls VR804 & VR805 fully counterclockwise 2. Turn R, G & B Bias Controls VR801, 802, 803 fully counterclockwise 3. Set Ser. Nor. Switch to Ser. position. | Monitor connected to CPC664. |
| 2 | Black & White Tracking | | Monitor Screen Monitor Oscilloscope | 1. Adjust 120V at the collector of Q802 with Brightness Control on the Oscilloscope. 2. Rotate the screen control to fully counterclockwise 3. bring it back to obtain dim line of one prominent colour 3. Rotate the other two colours till a dim white line is obtained 4. Bring Ser. Nor. Switch to Nor. position | Monitor connected to CPC664 If required, adjust the colour control |
| 3 | | | | If no satisfactory results repeat step 2 | |
| 4 | Vertical Size | Program the paper edge | Monitor Screen | Adjust VR406 to obtain paper edge to be 145mm. | Use non-magnetic ruler |
| 5. | Focus Adjustment | Program the paper edge | Monitor Screen | Adjust Focus Control on the Flyback Tx. for maximum definition & details | Brightness & Contrast controls set to normal viewing |
| 6 | 5V Adjustment | Switch on the Monitor | AVO Meter | Connect AVO across C518 & adjust VR501 to obtain 5V exactly | |
| This adjustment (6) should not be disturbed under normal conditions. | | | | | |
| 7 | Sub Brightness Control | Switch on the Monitor | AVO Meter | Connect AVO to collector of Q802. Adjust VR402 to read 120V | Keep Brightness Control to maximum position |
| 8 | Sub H. Hold & H. Hold Adjustment | Switch on the Monitor | Frequency Counter | Rotate H. Hold fully counterclockwise. 1. Adjust VR404 to read 14500Hz 2. Adjust VR403 to read 15825Hz | Read the Meter across CRT Heater & Earth |

CTM644 CIRCUIT DIAGRAM

CAUTION: SINCE THESE PARTS MARKED BY ~~A~~ ARE CRITICAL FOR SAFETY, USE ONES DESCRIBED ON PARTS LIST ONLY.

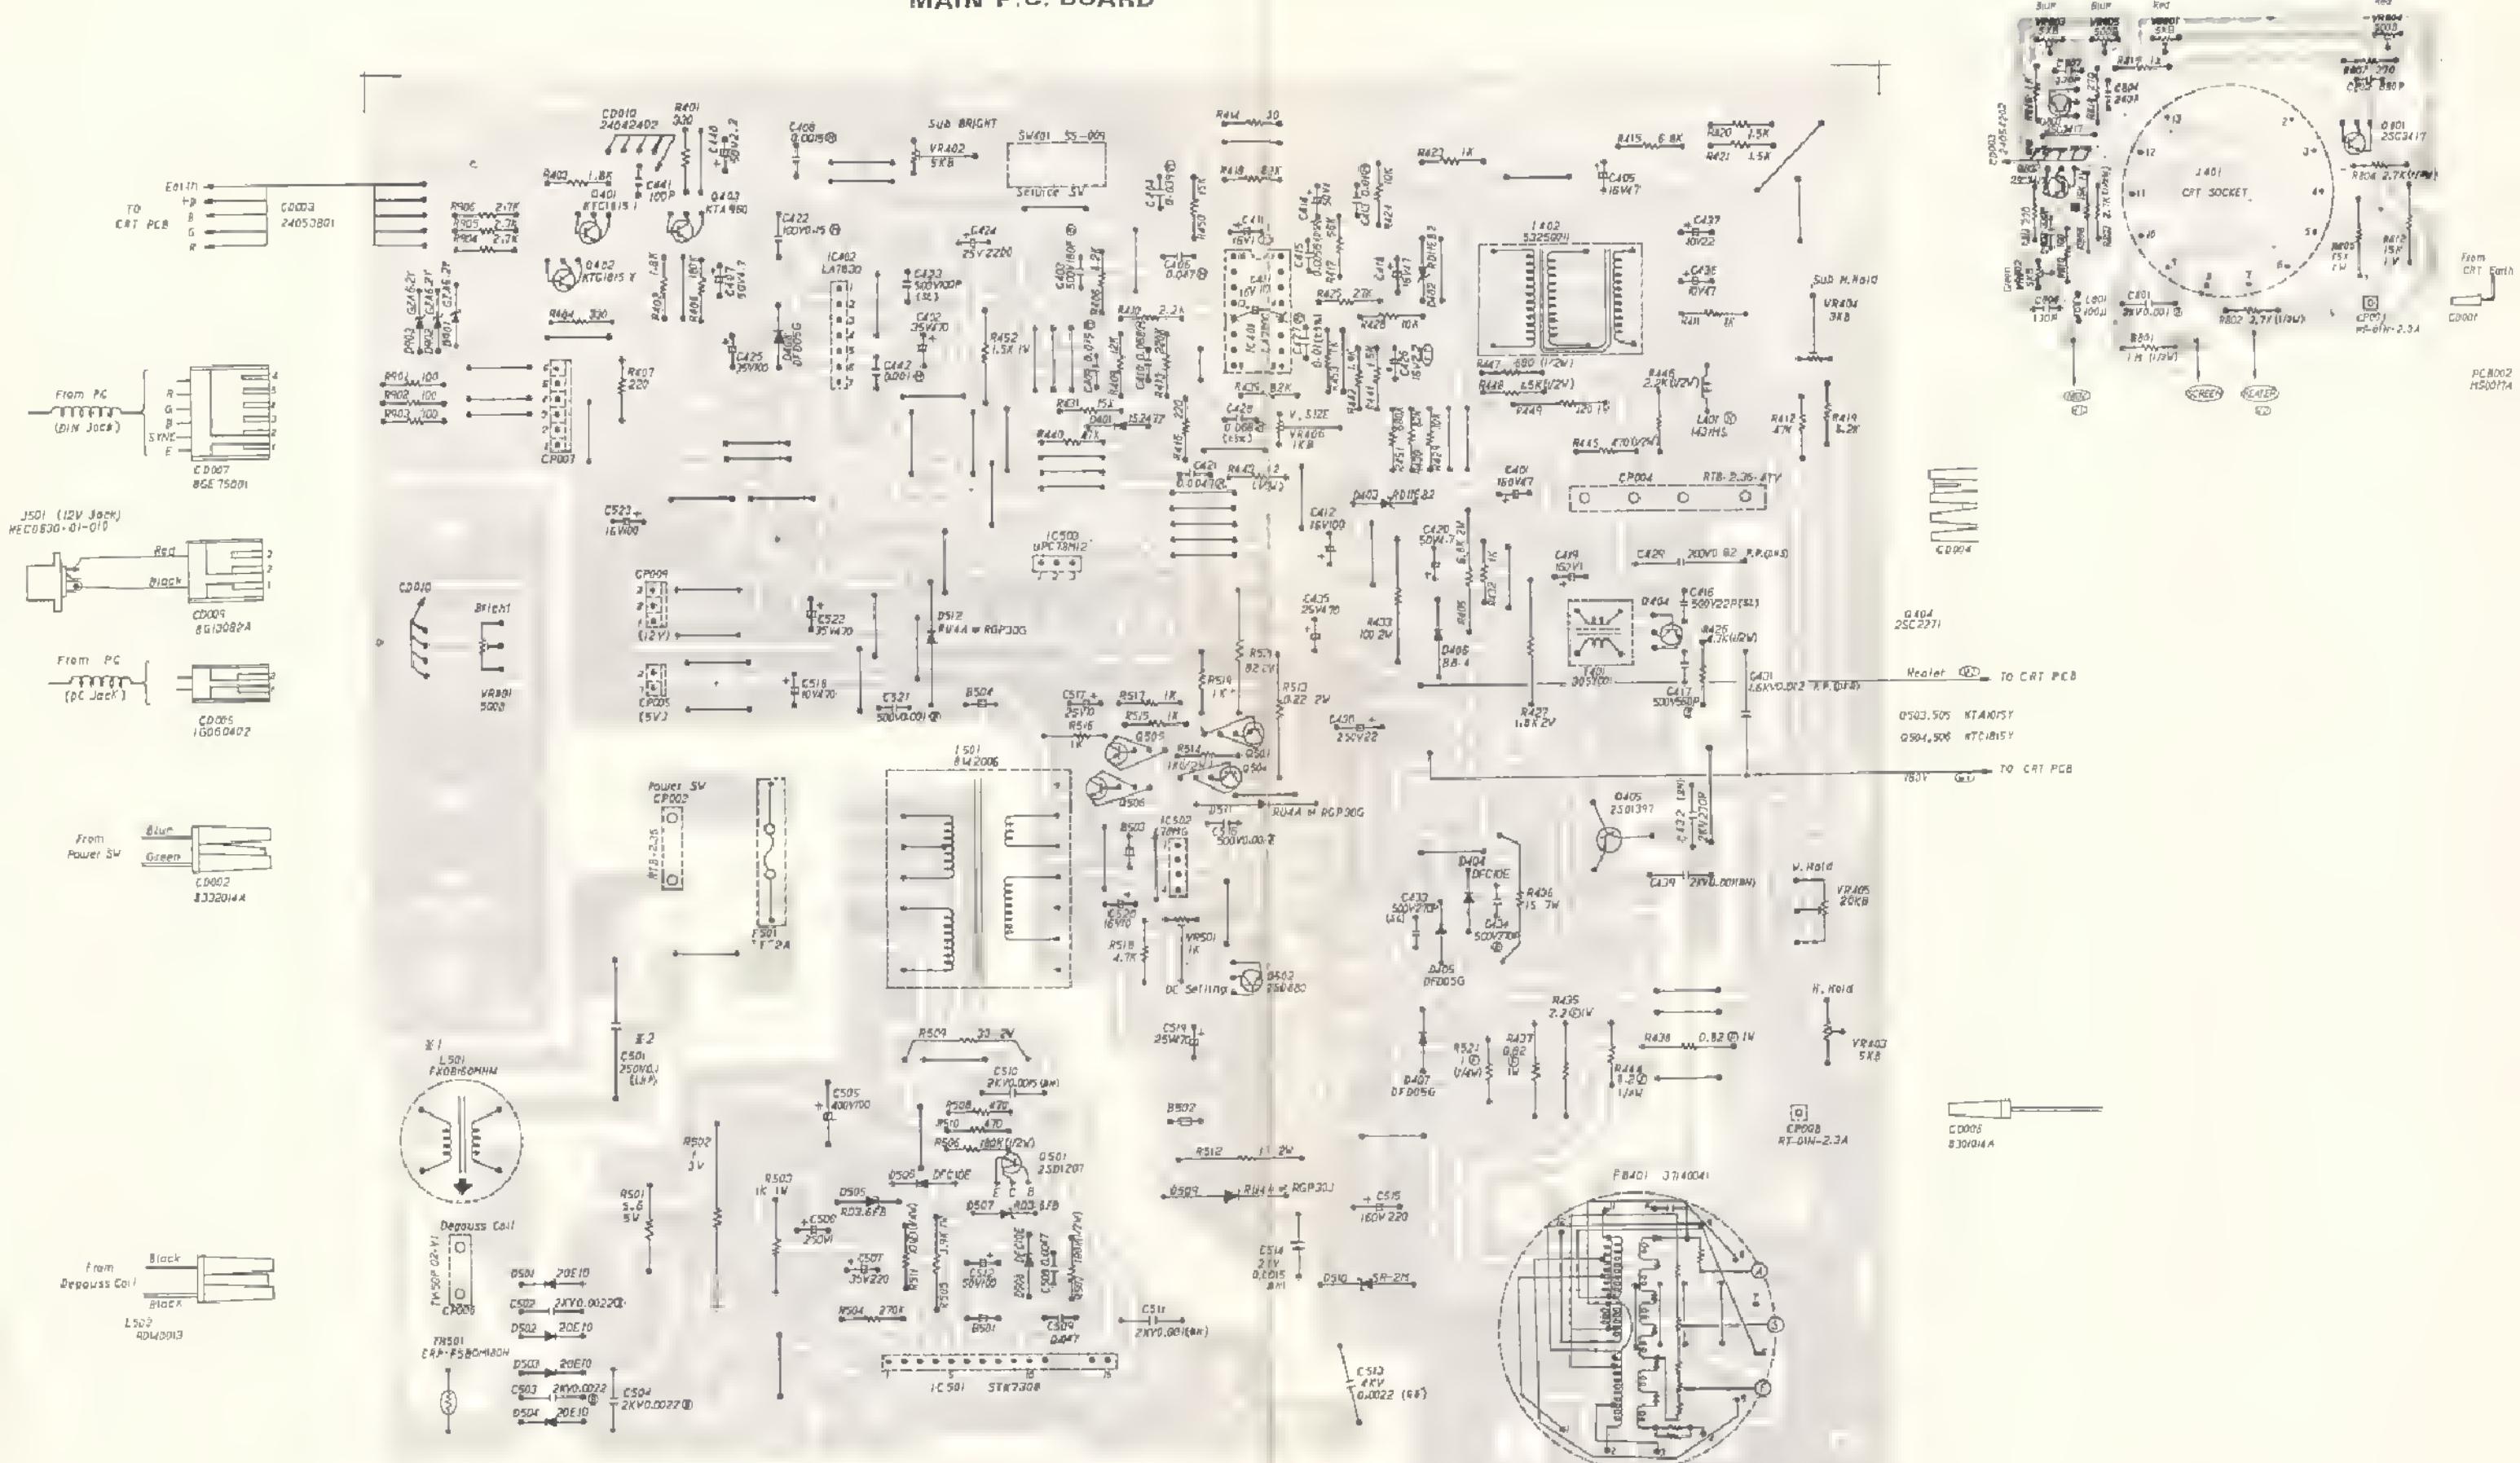

ATTENTION : LES PIÈCES REPÉRÉES PAR UN A SONT DANGEREUSES AU POINT DE VUE SÉCURITÉ. N'UTILISER QUE CELLES DÉCRITTES DANS LA MÉMOIRE ATTACHEE DURANT LA PIÈCE.

NOTE: THIS SCHEMATIC DIAGRAM IS THE LATEST AT THE TIME
OF PRINTING AND SUBJECT TO CHANGE WITHOUT NOTICE.

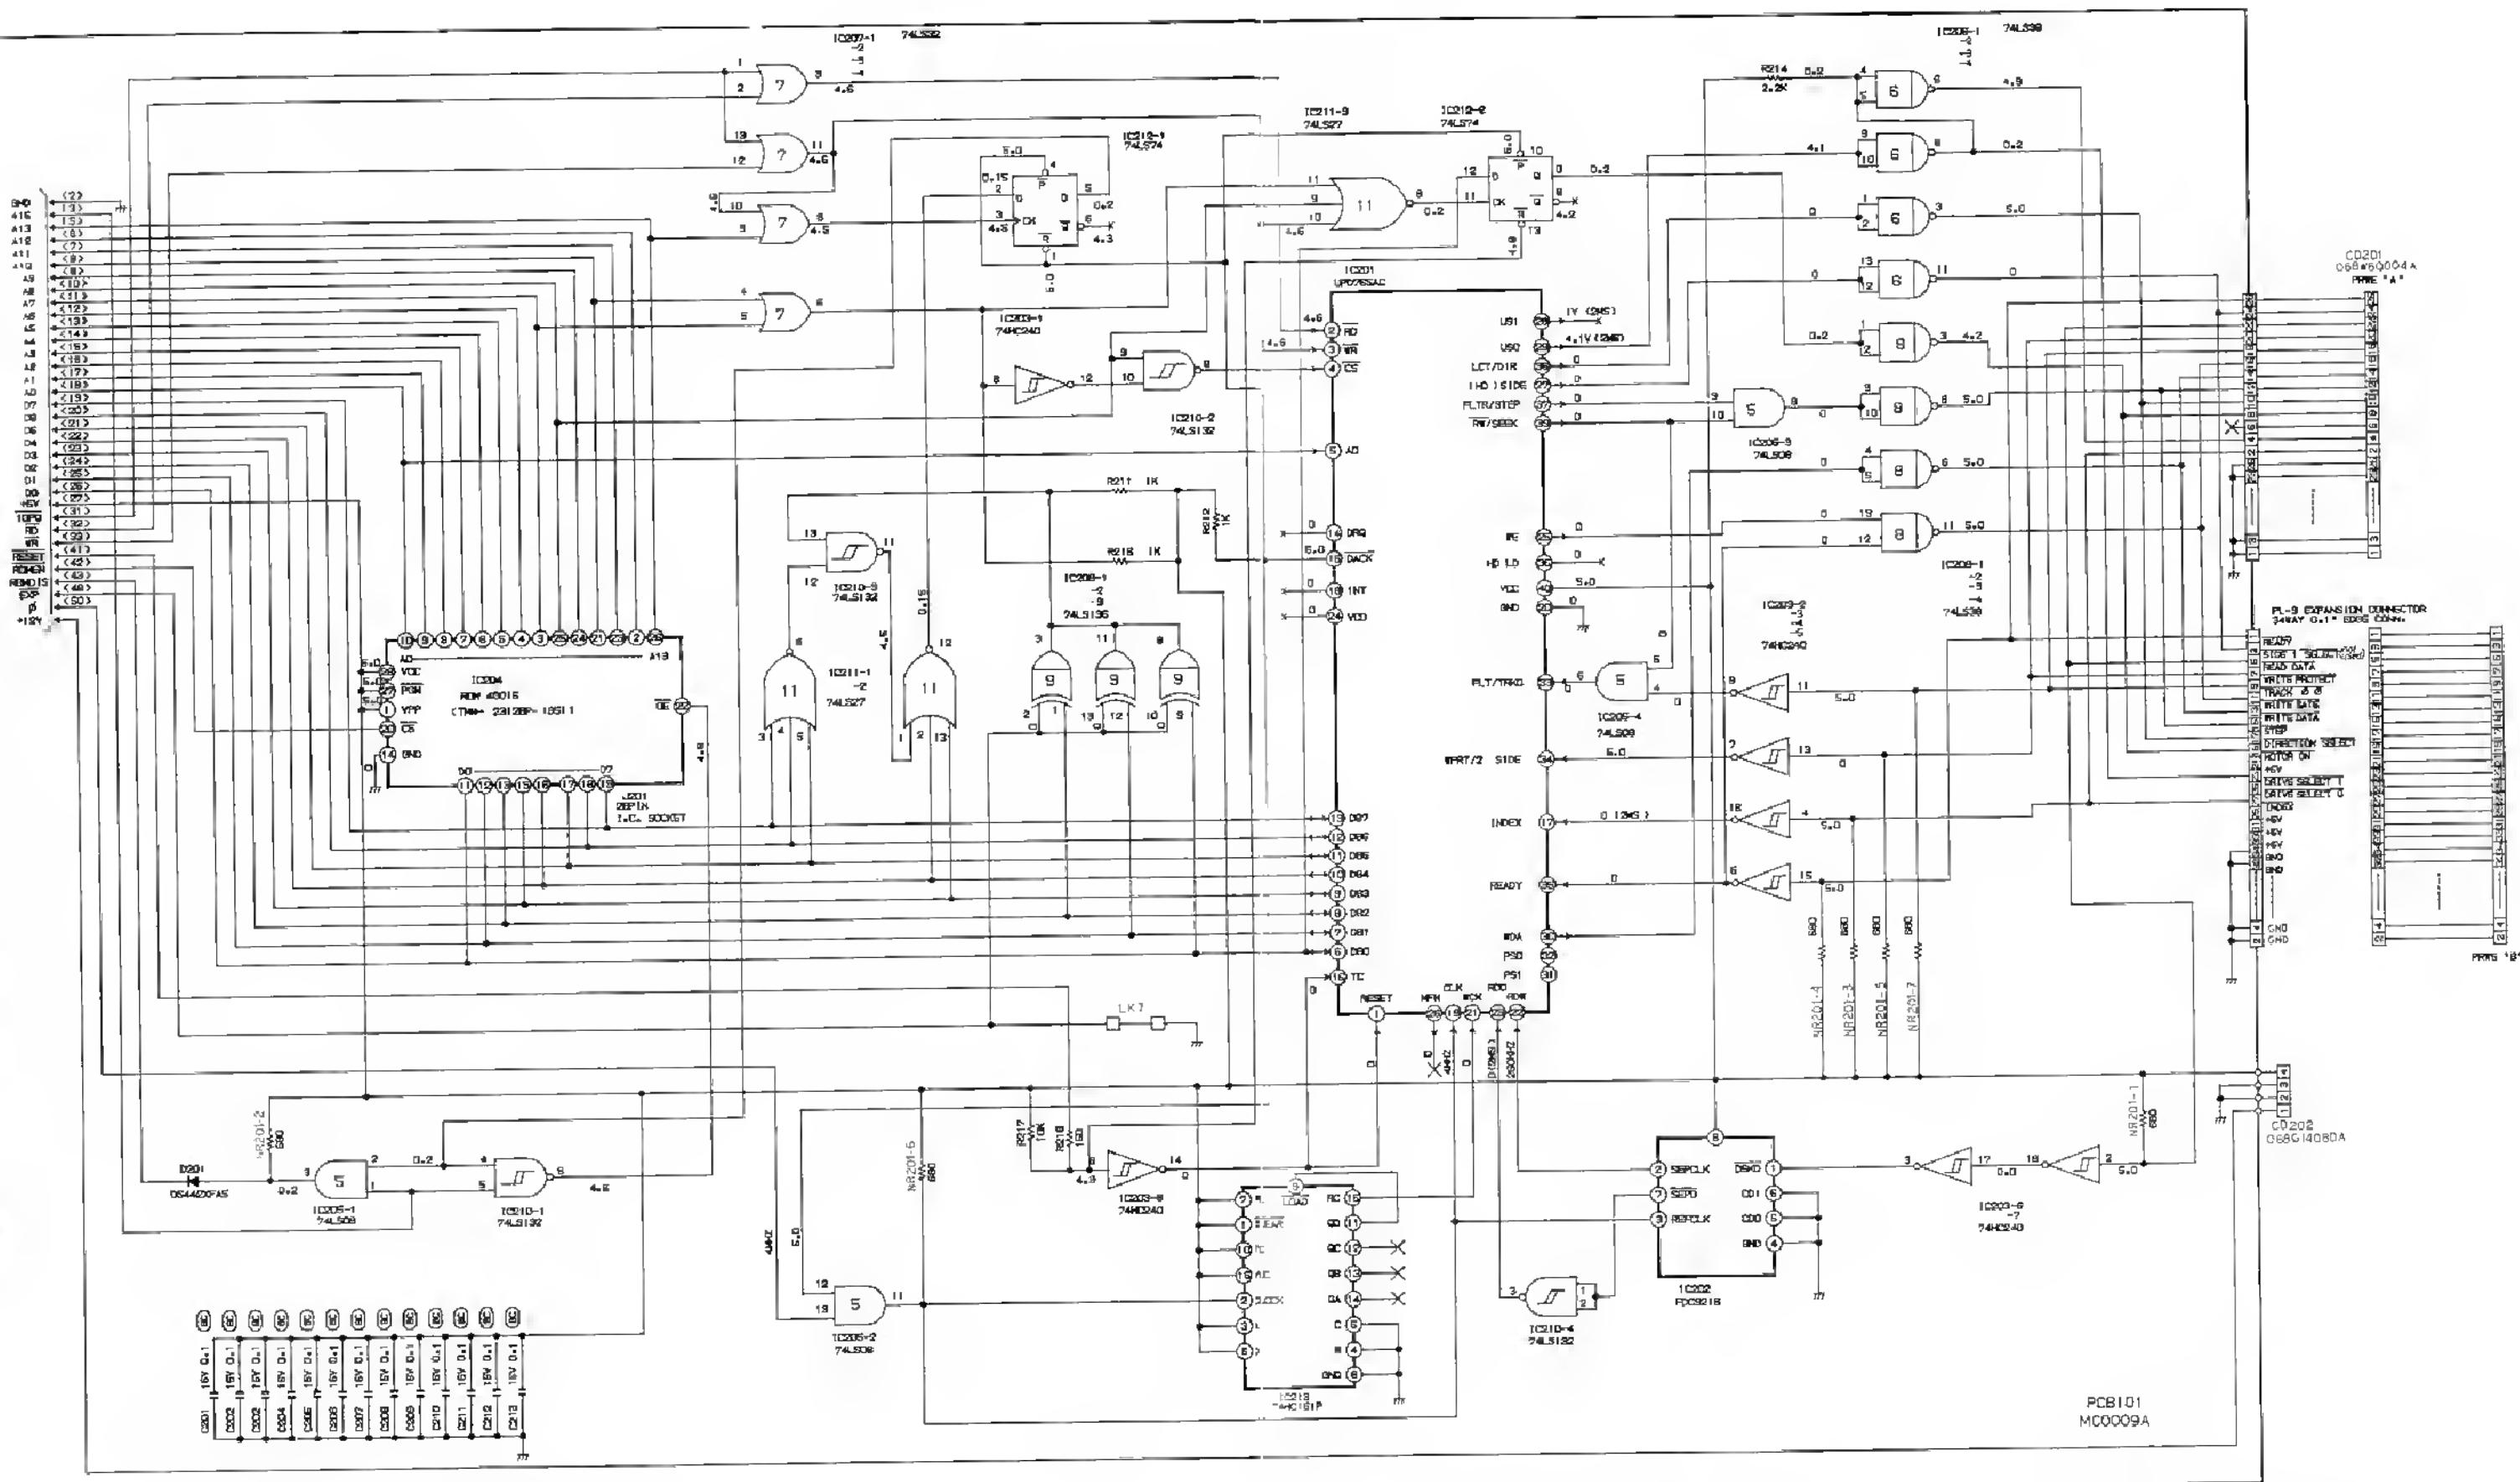

1/3/54

M 203-09

MAIN P.C. BOARD

INTERFACE CIRCUIT DIAGRAM

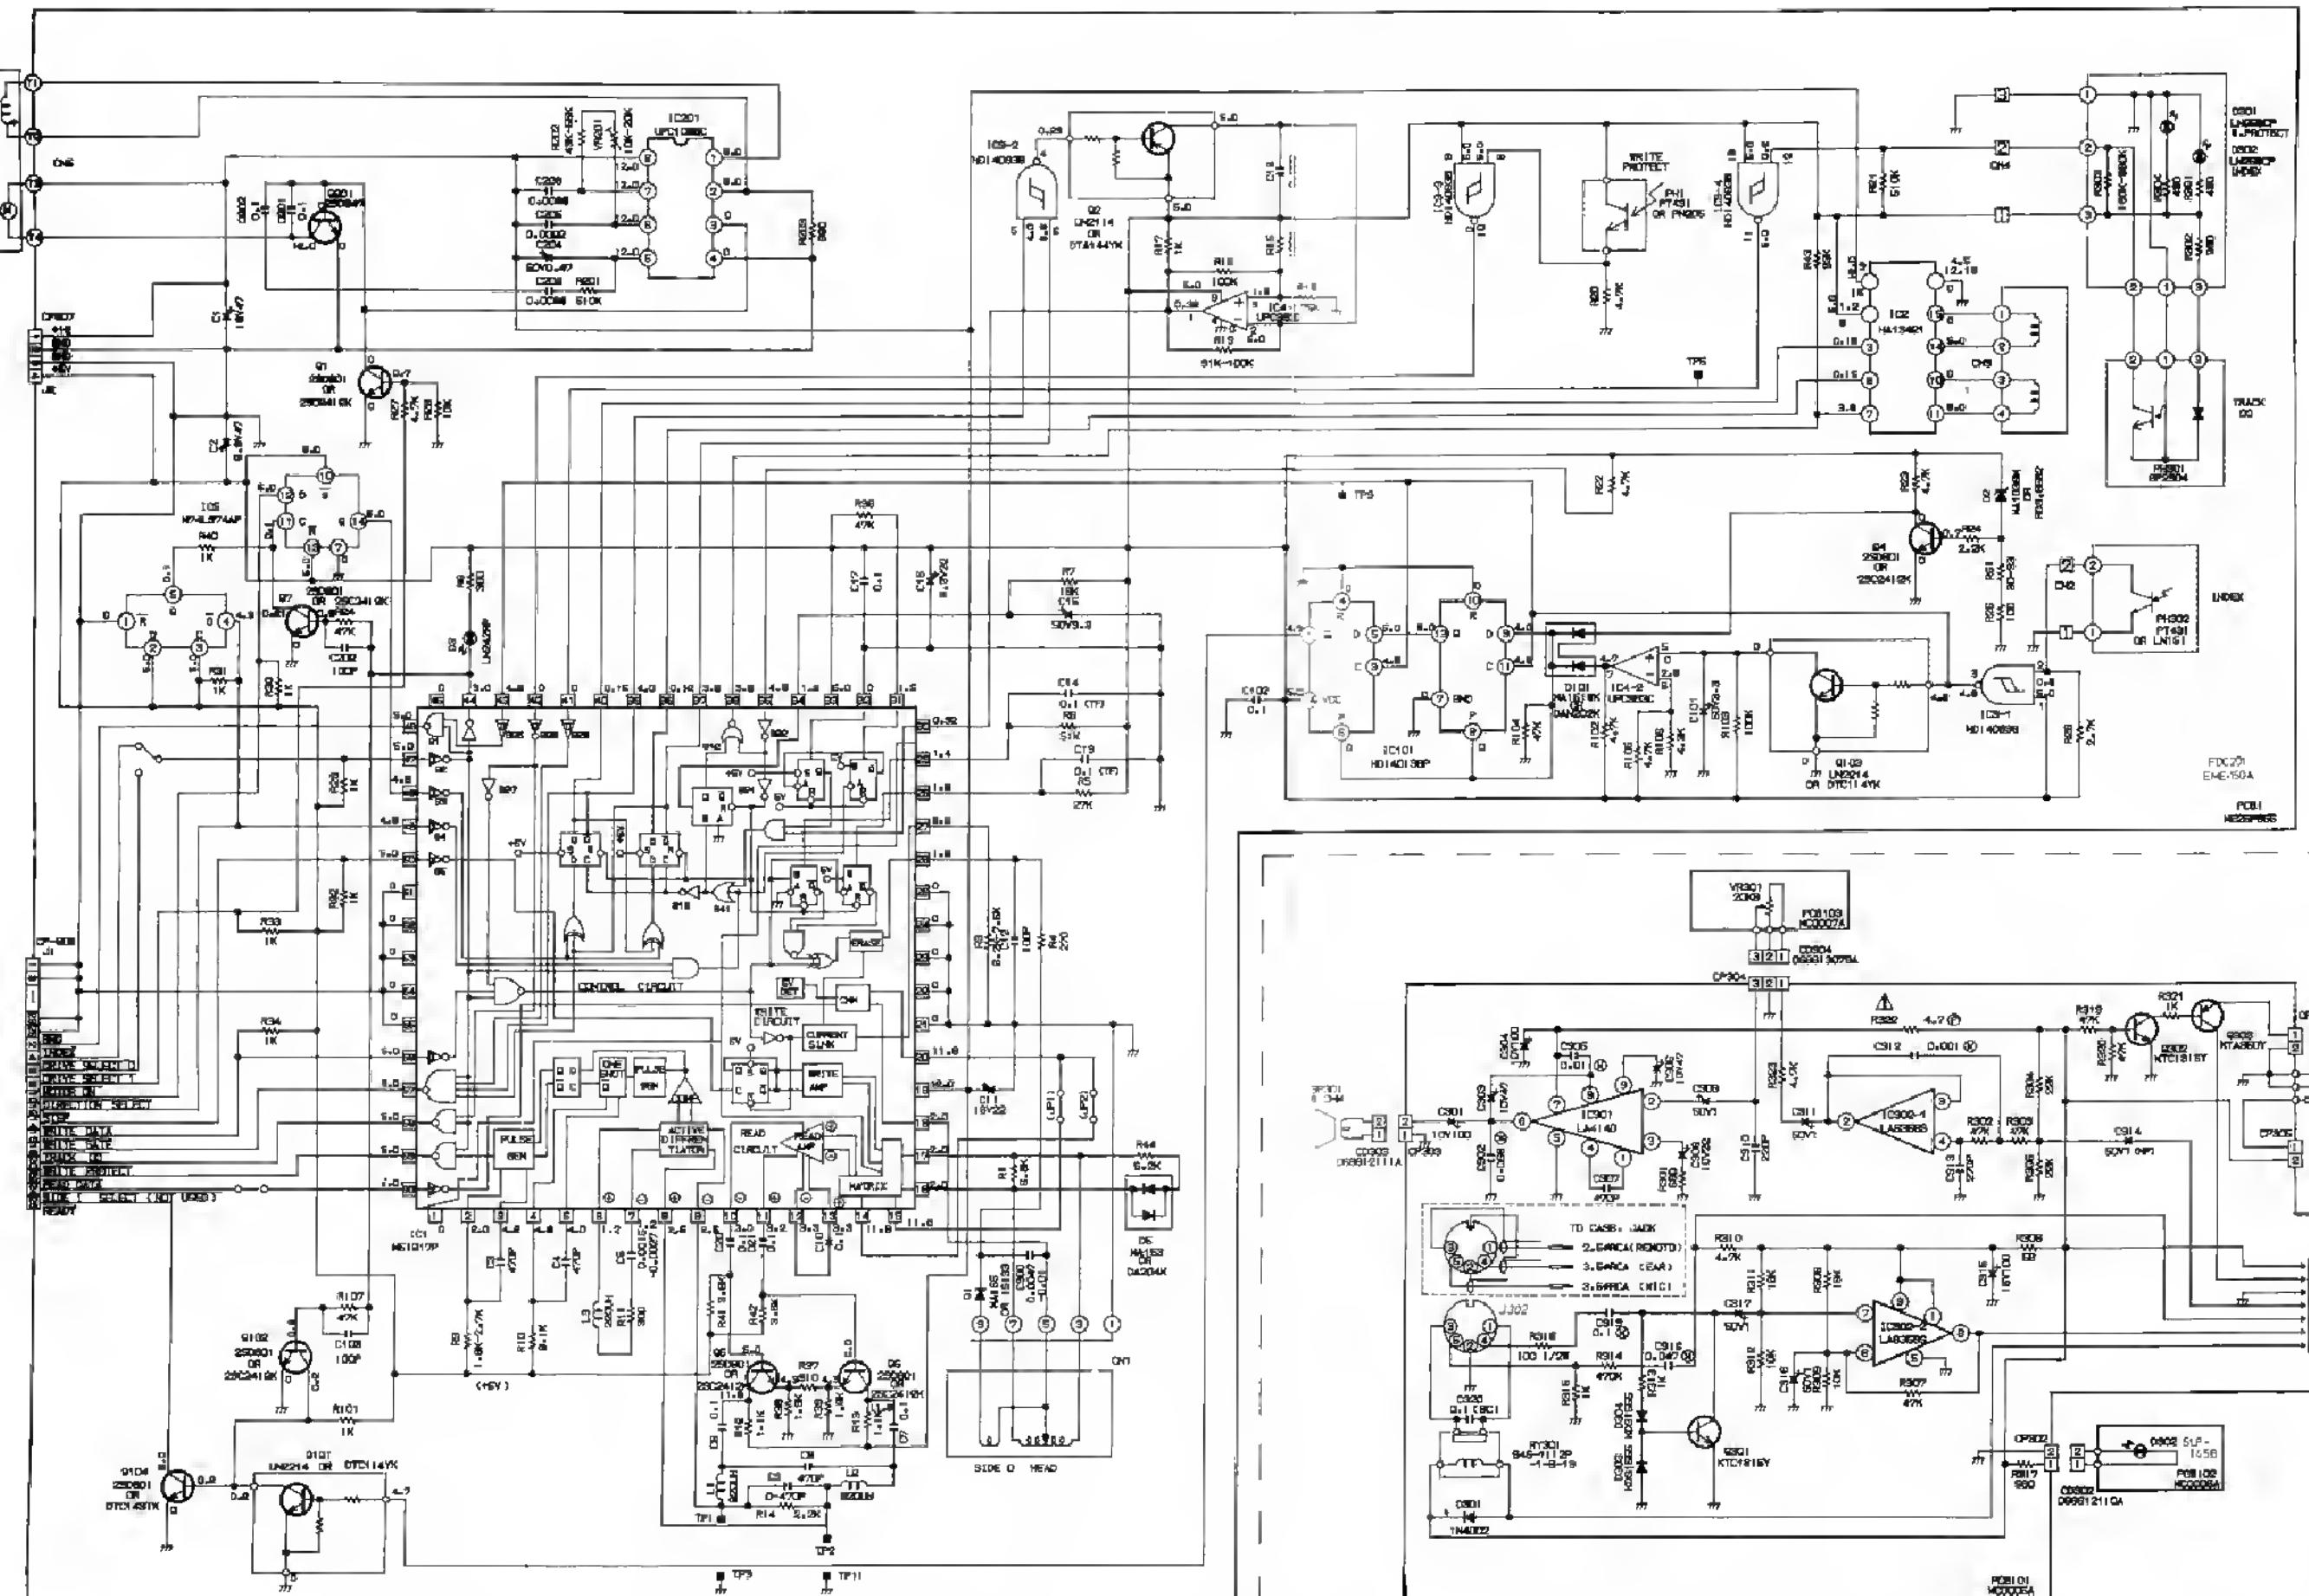

CONDITION: MATH STITCH IS STITCHED ON.
BE READY TO WORK.
AND THE DISKET IS NOT IN DRIVE.

NOTE: THIS SCHEMATIC DIAGRAM IS THE LATEST AT THE TIME OF PRINTING AND SUBJECT TO CHANGE WITHOUT NOTICE.

CHASSIS SCHEMATIC DIAGRAM

M208-01 1-3584

DISC CONTROL CIRCUIT DIAGRAM

CONDITION 3 MAIN SWITCH IS SWITCHED ON,
BEG READY TO WORK.
AND THE DISKETTE IS NOT IN DRIVE
SI PIN NO 24***25 IS LOW ACTIVE.

NOTE: THIS SCHEMATIC DIAGRAM IS THE LATEST AT THE TIME
OF PRINTING AND SUBJECT TO CHANGE WITHOUT NOTICE

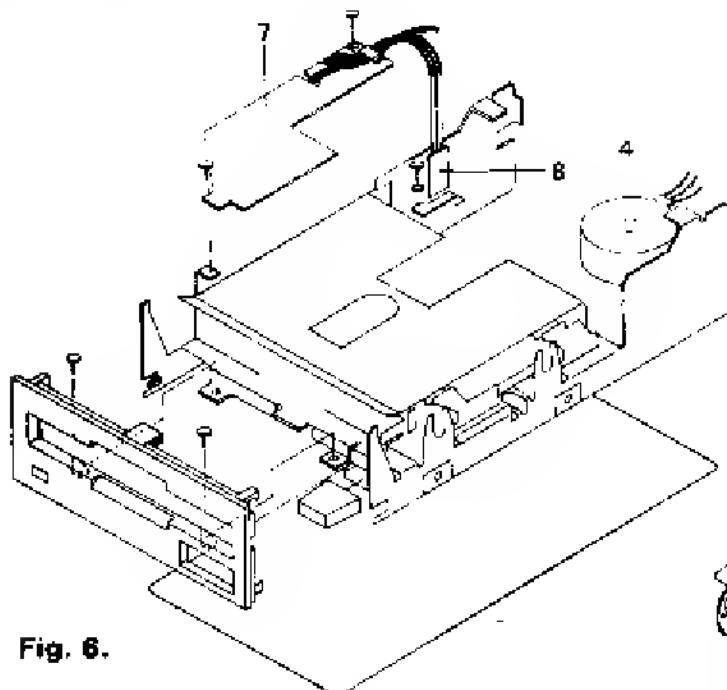

ATTENTION LES PIÈCES RÉPARÉES PAR UN ETANT DANGEREUSES EN POINT DE VUE SÉCURITÉ NE UTILISER QUE CELLES DÉCRITES DANS LA NOTICE D'ENCLOSURE DES PIÈCES.

CAUTION! SINCE THESE PARTS MARKED BY  ARE CRITICAL FOR SAFETY, USE UNITS DESCRIBED ON PARTS LIST ONLY.

CASSETTE CONTROL CIRCUIT DIAGRAM

| Sym | Description |
|-----|-------------------------------------|
| 1 | Head Assembly |
| 2 | Stepper Motor |
| 3 | Stepper Motor Rotation Bolt |
| 4 | Spindle Motor |
| 5 | Flywheel |
| 6 | Pulley |
| 7 | Read/Write Protect/Index/LED P.C.B. |
| 8 | Track OO Sensor Assembly |
| 9 | Spring |
| 10 | Loading Unit |

MECHANISM

This drawing is for information only. During the warranty period Service Agents must return the Disc Drive Mechanism complete with PCB30001 for replacement.

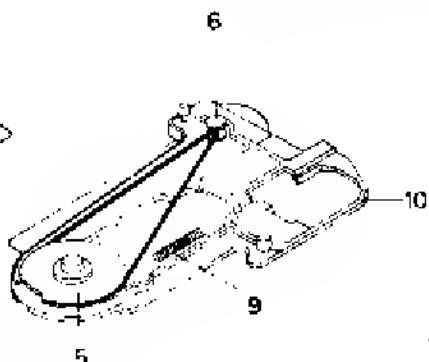

Fig. 6.

MECHANICAL REPLACEMENTS

Head Assembly

- i) Remove 2 screws from F. panel and remove F. panel.
- ii) Remove 4 screws from the control PCB
- iii) Disconnect plug from Stepper Motor.
- iv) Disconnect plug from LED P.C.B.
- v) Disconnect Transistor from Spindle Motor.
- vi) Disconnect Index Sensor from front of P.C.B.
- vii) Raise P.C.B. from side opposite LED and remove plug from head.
- viii) Control P.C.B. will now be free - remove.
- ix) Remove 4 screws securing the Loading Unit to the chassis from the Flywheel side and remove Loading Unit.
- x) Remove spring and rod support screws.
- xi) Gently slide the head off the rod.
- xii) Replacement is reverse process
After reassembly check alignment of Azimuth Burst/Track OO Positioning.

Spindle Motor

- i) Remove Transistor fitted to Motor.
- ii) Unplug CNS from Control P.C.B.
- iii) Remove Drive Belt.
- iv) Undo 2 screws securing motor.
- v) Replacement is reversal of removal.
- vi) Adjust VR201 so Index frequency is $200 \pm 2\text{ms}$ (See Fig. 5-1).

Stepper Motor

- ii) Remove Control P.C.B. as (1).
- ii) Remove 2 securing screws for Stepper Motor Bracket.
- iii) Stepper Motor can now be removed.
- iv) After replacement index and positioning must be checked and amended as necessary.

TECHNICAL SPECIFICATION

LSI CHIPS:

| | |
|-----------|--|
| Z80A | processor running at 4MHz |
| 128K | bytes of RAM arranged in two 64K banks (over 41K available to user in BASIC, 61K available TPA to CP/M Plus) |
| 48K | bytes of ROM containing BASIC, the operating system and disc extensions |
| 6845 | CRT controller device |
| AY-3-8912 | sound generator chip 3 voice, 8 octaves |
| 8255 | parallel I/O device |
| 7653 | floppy disc controller |

DISPLAY SPECIFICATION:

| Display Mode | Mode 1 | Mode 2 | Mode 3 |
|-----------------------|-----------|-----------|------------|
| No. of colours | 4 from 27 | 2 from 27 | 16 from 27 |
| Vertical dots | 200 | 200 | 200 |
| Horizontal dots | 320 | 640 | 160 |
| Horizontal characters | 40 | 80 | 20 |

KEYBOARD:

74 Keys — qwerty style, numeric cluster, cursor and copy cursor, return, enter, shift, caps, lock, tab, delete, clear, control.

CASSETTE HANDLING:

Write speed software selectable — 1K baud or 2K baud, read speed automatically established by software. Motor on/off controlled by software

ADD-ON ABILITY:

Additional compact floppy disc drive system, type FD-1.

Centronics compatible printer.

Joystick(s).

Various peripherals including up to 252 additional 16K ROMs.

EXTERNAL SOCKETS:

PCB-edge connectors for general purpose expansion and Centronics parallel printer.

Disc drive 2 socket (Use DI-2 connecting lead).

9 Pin D-type socket for joystick (Amsoft type JY2).

6 Pin DIN Socket for

— RGB and sync

— Luminence + sync

5 Pin DIN socket for external cassette recorder. (Use CL1 lead).

3.5mm stereo socket for stereo sound output.

5mm plug and lead to connect 12V (disc) power socket on the monitor.

5mm socket for CPC6128 5v power supply (supplied exclusively from monitor).

DIMENSIONS (mm):

| | w | h | d |
|-----------|-----|-----|-----|
| Keyboard | 510 | 48 | 170 |
| CTM644 | 375 | 340 | 365 |
| GT85 | 305 | 315 | 335 |
| Joystick | 90 | 170 | 100 |
| Modulator | 120 | 70 | 170 |

WEIGHTS (Kg):

| | |
|-----------|------|
| Keyboard | 2.0 |
| CTM644 | 10.6 |
| GT85 | 6.3 |
| Joystick | 0.3 |
| Modulator | 1.4 |

POWER SUPPLY:

Screen System: 240V AC 50Hz (keyboard and disc drive power supplied by screen system)

CP/M usually assumes an 80 column screen is available. The CPC6128's ability to present text in 80 column format is a prerequisite for the majority of CP/M applications.

Disc System Specification:

The disc drive is a 3 inch system, conforming to the Hitachi/Panasonic standard. The software is configured for a 12ms seek rate, and 30ms settling time.

The system is designed to control a maximum of 2 drives. A ROM contains the extensions for AMSDOS and the machine dependent elements of CP/M and Dr LOGO.

The ruggedly constructed 3 inch discs are usable on both sides, each side is provided with a reusable write protect clip which is slid into position as required.

AMSDOS & CP/M Plus

AMSDOS is a disc operating system which expands Locomotive BASIC, adding additional commands to make full use of the disc files. AMSDOS enables BASIC programs to access disc files in the same manner as cassette tiles, in fact the same commands are used with file names conforming to CP/M and CP/M Plus conventions. AMSDOS and CP/M both share the same file structure and can read and write each other's tiles. The Digital Research CP/M Plus operating system is supplied with the CPC6128, permitting the user to access the wealth of applications software written to run under CP/M. In addition to the usual CP/M Plus utilities, additional features have been included for the CPC6128.

Disc Organisation:

Both AMSDOS and CP/M Plus support two different disc formats: System format, and DATA only format.

Format selection is automatic on disc access. Both formats use the same framework, but have different sector configurations.

Common to all

Single-sided, double density.

512 byte sector size.

40 tracks.

Sectors interleaved 2:1.

SYSTEM format:

The most frequently used format, since CP/M 2.2 and CP/M Plus may only be loaded from a system format disc. 2K is used for the directory, and 9K reserved for the system.

9 sectors per track.

2 reserved tracks for CP/M.

169K byte tile capacity.

DATA only format:

All the tracks are used to store data.

2K bytes reserved for the directory.

9 sectors per track

No reserved tracks.

178K byte tile capacity.

The CPC6128 is compatible with programs developed for Amstrad CP/M 2.2 and will run Amstrad CP/M 2.2 discs. Programs developed specifically for CP/M Plus with GSX will not run on Amstrad CP/M 2.2. The term CP/M Plus is synonymous with CP/M 3.0.

Either side of an AMSTRAD CP/M Plus or AMSDOS disc may be accessed by the disc controller, depending on which way round the disc is inserted.

Please note that while every care has been taken to ensure compatibility with existing CP/M software, some packages available make use of undocumented features of the CP/M operating system, and these may not be supported by the CPC6128 implementation. Protected cassette tiles may not be occupied on disc, and care should be taken to observe the copyright conditions of any software when transferring programmes between cassette and disc.

In keeping with our policy of continually improving our service, and the technical quality of our products, we reserve the right to change component types, manufacturers, sources of supply or technical specification at any time.
